Published September 25, 2020 When it comes to digital security, public Wi-Fi networks are not secure enough, making it much easier for hackers to access your personal data. Whether you're in a library or scrolling through Facebook in a coffee shop, it's important to install a VPN on your device. VPNs work wonders when it comes to securing your internet connection. By creating an encrypted tunnel between a remote server operated by a VPN service, they protect your personal data from prying eyes. There are many VPNs available on the internet and we have put together a list of the best VPNs that stand out from the rest. How to choose a VPN Free trial period - Free trials allow you to try the product without risk. The same idea technically applies to those with a 30-day full refund as well. Speed - You want your VPN to be as fast as the internet speed at home. Good quality VPNs are the ones where you see a small difference between these speeds. Device Connection - Of course, the more devices that can connect to a VPN, the better. This increases customer reach and product value. You also want to consider compatibility, since smaller VPNs can only work for Mac or Windows. Number of servers - The number of servers determines how much capacity a VPN can handle during a connection. The more servers, the more users it can handle without being late for potential outages or slow speeds. Kill - The presence of this feature means that your IP address is not exposed if the VPN is disabled for some reason. The lack of this feature is a big deal because the whole reason why you pay for a VPN is to hide your IP address, among other things. (Learn how to avoid tracking online here: Big Brother is watching you online: How to Avoid Tracking) Why you should trust us Our handpicked VPNs are incredibly effective and offer the kind of distinctive features that give you a safe viewing experience. They outperform many VPNs in both speed and security. Their primary goal is to ensure maximum security, allowing you to safely browse the web and prevent any potential threat of harm. Among the best VPNs many unique features include tunnel separation, strict registration policies, high levels of encryption, and the availability of international servers. We've put together them in this article to enlighten our readers and offer the best tips before you get one. So take your word for it, and if you go on the VPN mentioned below, you will be completely appeased.1. NordVPNThe most popular VPN on the market these days is NordVPN and it's easy Why. It has extensive coverage, offering a selection of more than 5,000 servers spanning 59 countries. Because of the large number of servers, its speed is similar to your Wi-Fi at home. Lifehack's CEO, Leon, has been using NordVPN for years and wants to recommend it for its wonderful counting of servers in different places with no logs policy. VPN works great with Netflix and Fire TV stick, too. NordVPN is also compatible with Mac, Windows and Linux. You can download the app on Chrome, Firefox, Android and Mac OS. Thanks to its massive reach, it is easy to connect multiple devices on these servers. In terms of pricing, while NordVPN does not have a free trial period, they claim that their plans are significantly cheaper than those of their competitors. For example, the annual ExpressVPN plan costs \$3.32 per month, but NordVPN charges only \$5.99 per month. NordVPN has a new protocol called NordLynx, which is based on WireGuard with speed benefits, although it is still under development. If you are looking for overall quality and availability, this is one of the best VPNs around. Buy this VPN. 2. ExpressVPNExpressVPN is the second best option out there to maintain your privacy while browsing the web. Like many other VPNs here, they will encrypt your IP address, offer wide coverage, and may have multiple devices connected to their servers. Compared to NordVPN, while the price point is higher, ExpressVPN's biggest selling point is the number of countries that their connection covers. Depending on where you are in the world, this may be the only option you have. They have fewer servers - 160, to be exact - but they make up for a low number of servers covering 94 countries. Cost wise, it's best to go with an annual plan where they charge \$8.32 a month. They also have plans for one and six months. Buy this VPN.3. Surf SharkWith regards to Surf Shark, you can connect multiple devices to their servers, and this is compatible with Windows, Linux and Mac. It is also available on Android, iOS, Chrome, Firefox, and FireTV. Furthermore, Surf Shark can white list apps and sites, allowing them to bypass VPN. This, along with split-tunneling lines, is another feature that many VPNs offer. The difference is that Surf Shark allows you a white list of specific apps or any website, while most VPNs will have a white list of all sites or none at all. Another consideration for this app is the price. While lower-level plans are more expensive than others, the 24-month Surf Shark plan costs \$2.69 per month, so it's cheaper than even the equivalent NordVPN plan! Buy this VPN.4. CyberGhostAnother top-review VPN CyberGhost. They have been around for 15 years and refine their offerings and features to stay competitive. They provide a standard web browsing and secure access package and give you access to regionally blocked content. The network also supports security against hackers, malware and phishing. Besides You can connect multiple devices, and it's compatible with all kinds of platforms. What sets CyberGhost apart from others is their extensive extensive They have multiple servers, and the pricing point is still very low. It covers more than 88 countries and has approximately 6,200 servers for you to choose from, all while charging \$2.75 for their 18-month plan. Buy this VPN.5. IPVanishIPVanish's main goal is to give users online freedom by providing fast speed and private connections. It is clear that they can fulfill this promise because they provide many of the features that were listed earlier from their competitors. IPVanish is part of SugarSync now. What is it, you ask? It's a cloud service that syncs files between devices and computers to share, back up, and many others. This means that other devices can access different files and videos as long as they are connected to your particular VPN. In addition, it can serve as a backup plan if you hack or lose your device for some reason. Buy this VPN.6. Private Internet Access Private Internet Access (PIA) is a surprisingly generous company in many ways. Aside from the obvious features, they offer great incentives and discounts for people to try their products. They claim to be the most reliable and reliable VPN around and we believe that. One notable thing is that PIA offers a free two-month trial. Compared to other VPNs at the moment, none of them have provided free trials (although they all come with a 30-day reverse money guarantee). On top of this, small businesses can use their VPN at a reduced rate. There is also the fact that their price plans go as low as \$2.69 per month for two years and they allow you to pay with gift cards. In terms of specifications, PIA has over 2,695 servers that cover 47 countries right now. These specific aspects make pia unique and one of the best VPNs to consider. Buy this VPN. 7. Hotspot ShieldHotspot Shield is all about providing protection while browsing the web or via streaming services such as Netflix. Encryption is military-grade, and its speed is ultra-fast. In truth, it's even on the market as one of the fastest VPNs. Hotspot Shield offers a plan that costs just \$7.99 a month; However, it is one of the few on this list to provide its services for free. Like other Freemium apps, the free version comes with disabilities. However, it gives you a much better feel for a VPN. Also, please note that the encryption feature still exists, although free-to-air restrictions include connecting to one location in the U.S. and having limited streaming and speed options. Buy this VPN.8. TunnelBearAs unusual as a choice of names for safety protection maybe TunnelBear is nothing short of incredible. It makes our list of the best VPNs for various reasons. The biggest of these is that the company goes through an annual security audit. This is noteworthy because many VPNs are not worried about independent audits to make sure their systems are protected and protected from any problems. This is crucial because VPN VPN has gained some bad reputation over the years, as TunnelBear noted in his post about their security audit. The fact that they do so every year ensures that nothing is compromised. In addition, TunnelBear offers limited services for free, but even their paid plans are quite cheap. For individuals, you just pay \$3.33 a month. The only catch is that you can join five devices regardless of which paid plan you choose. Buy this VPN.9. NortonNorton has been on the security scene for some time now and is actually one of the founders of the internet security industry. It started with protection against viruses and malware in 1991 and has since branched out to other sectors as the industry has changed. As you would expect from a company that has been around for a long time, Norton provides excellent services and some of their other services have gone into the VPN package. In fact, Norton is the only one yet to offer a password manager with their VPN services. They provide 50GB of cloud storage as well. Norton has one of the cheapest VPNs, given that you can get their luxury plan at \$49.99 per year. That comes in at about \$4.17 a month. It may be a little higher than other equivalent plans, but you get a lot of extra value, making it worth the price. Buy this VPN.10. The ultimate VPN we want to cover is StrongVPN. Like many others, it's great at blocking unnecessary web traffic and providing a quick and easy solution to navigate the web without any obstacles. StrongVPN has more than 900 servers. It is available in more than 30 countries and is compatible with all devices. Other than that, the only notable selling point it has compared to others is that it also offers Sugarsync services and 250GB of storage, regardless of the chosen plan. As for pricing, their annual plan costs \$5.83 per month, while their monthly is \$1.0. Buy this VPN. Lower Line-Getting online protection is essential these days, and companies recognize this. With lots of hacks and violations occurring every day, the best VPNs can provide a great haven for many people who value their security and privacy. We hope that by going up this list, you will be able to find the best VPN that you can trust and enjoy using. As you can see, there are some great options without a real wrong one out there. Choose the VPN that is best for you.
