

Prof. Mattia Sanne

Ph.D. Program in Global Health and Health Security
Master Program in Global Health and Development

I am an experienced researcher with strong skills in data analysis, simulation modelling and geographic information systems (GIS). The crosscutting nature of my expertise has allowed me to adapt and be successful in extremely different research contexts, including agriculture, interpersonal negotiation, and public health.

Currently, I serve as Assistant Professor in Taipei Medical University, where I teach the following courses: Medical Statistics, Global Environmental Changes & Health, Global Health Organizations & Initiatives.

My main research interests include

- Tobacco Control, with a specific focus on conventional smoking and new products, risk communication of smoking, mathematical modelling of tobacco control policy impacts, tobacco industry marketing and pricing strategies, smoking prevalence and consumption among lower social groups
- Environmental Health, including some previous experience on the spatial-temporal analysis of dengue fever epidemics and on the relationship of dengue fever spread with natural and anthropogenic factors
- Public Health Implications of the Covid-19 Pandemic
- Individual and Public Health Benefits of Physical Activity
