Methotrexate (MTX) is an antineoplastic agent that is used for the treatment of rheumatoid arthritis. Its use is linked with common and serious adverse reactions, most of which are dose-dependent. The aim of this project is to determine the prevalence of hepatic adverse reactions to MTX in an institution, to compare the prevalences in patients with rheumatoid arthritis versus non-rheumatoid arthritis patients, and to determine the most common histologic changes in the livers of patients. The investigators will test for the effects of other factors, such as age, sex, and duration of MTX use, on the prevalence of hepatic adverse reactions. The prevalence of hepatic reactions in 100 rheumatoid arthritis and 100 non-rheumatoid arthritis patients will be determined. The histologic changes seen in biopsies of the liver will be correlated with the effects of each of the above-mentioned factors on hepatic reactions. Q: Getting java.lang.IllegalStateException: The application is not currently running or is not allowed to run I get this error when I try to run my web application from Eclipse. If I try to run it from the command line I just get a "no such file or directory" error. How can I fix it? When I try to open it in the browser I get the error "The application is not currently running or is not allowed to run." and when I try to debug from Eclipse I get the error "java.lang.IllegalStateException: The application is not currently running or is not allowed to run". A: I figured out what was wrong. I was running my.war file by double clicking it instead of running it through the Eclipse. I ran it from the command line and now it works perfectly. It's possible that if you use syntax in your JSP files, that the host 520fdb1ae7
