A: Try this : ^.\*(Navil(?i)?Q: How to find value of input at specific time? I have a script that takes input from an external source. I want to be able to detect if the value of the input changes after a specific time (in seconds), and then take action. For example, a counter or timer should start when the user enters text, and stop after n seconds. If after n seconds, the input value changes, then an event should be triggered. This is an example of what I'm trying to do: \$(function() { var count = 0; \$('.start-counter').on('change', function() { count = 0; console.log('changing input value'); setTimeout(function() { console.log(count); count++; }, 2000); }); }); Try the below code. I have tested the below code in jsfiddle, it will set input value to 1 by default when page loads. So you can check the result. var count = 1; \$('.start-counter').on('input', function() { if (\$(this).val() == 1) { 520fdb1ae7
