Open Systems Powerpoint Templates Print Templates. Will an electric car become popular in the future? The US Energy Information Administration 's International Energy Outlook says yes. A top US energy official predicts the rapid penetration of electric cars. This year, electric vehicles will make up 5% of global new car sales. Bill Clinton said ' the sky's the limit' on electric cars during the 1992 presidential election. The same is true in China 's city of Shenzhen, the US Energy Information Administration 's International Energy Outlook says. This year, electric vehicles will make up 5% of global new car sales. If the forecast holds true, sales of plug-in hybrids will jump sevenfold from 2016 to 2040. China is already the world's largest electric vehicle market. In the US, the share of plug-ins sold in 2020 will be more than 50% higher than today. To ensure success for electric vehicles, the industry has to win over regulators, other manufacturers, consumers and shareholders. China is also a key factor. China is the world's largest auto market, with three-quarters of global sales. In the US, electric vehicle sales have lagged, but the market share has grown fast. The market for plug-ins (electrically powered hybrids) could be even bigger than for pure electrics. A question: Will an electric car become popular in the future?. You may be browsing our site from a device with a limited feature-set, such as a smart phone, so you may find that the site does not function as intended.
