

Nippo Timeboy V Manual

**Creating High Quality Images
that Exceed Professional Demands**

There are no limits to the colours nature creates. Which is why the ultimate goal for Minolta's digital colour copiers/printers is to reproduce natural colours as true-to-life as possible. The DIALTA Color CP9001 does this, and more. It not only scans images with superior high-resolution, but can also express highlight areas with exceptionally smooth gradation using its new "Screen LIMOS III" technology. Also integrated into the CP9001 is our unique FEET (Fine Edge Enhancement Technology) that enables highly accurate 1800dpi equivalent x 600dpi output. Minolta has employed these digital technologies to achieve a level of image quality enhancement that is smoother and more naturally beautiful. The result is the development of the DIALTA Color CP9001, the ultimate 'creates machine.'

Minolta CS Color Technologies are incorporated into the DIALTA Color CP9001.

Image quality, productivity, user friendliness, reliability, connectivity and environmental friendliness. We've concentrated these 6 features, essential in all business equipment, to create Minolta's unique colour image reproduction products. The DIALTA Color CP9001, using these innovative CS Color Technologies, provides efficient document work for complete customer satisfaction.
