Adobe is busy working on the release of Creative Suite 6 (CS6) and updating its major components that will see the launch of new applications including Photoshop CS6, InDesign CS6, Illustrator CS6 and After Effects CS6. Do not forget to look at our Photoshop CS6 review After improvements / bug fixes for CS5 that appeared in CS5.5, Adobe said that CS6 will mean a major new edition of our creative desktop tools, with a huge for every type of creative professional. It's a big claim. So what do we know about version 6.0 of the Adobe software cluster? And what are you talking about in Adobe Creative Cloud? Adobe CS6 will be launched in the first half of 2012. Adobe said, as well as itself. A discounted upgrade offer will be available for CS3 owners and above. This offer will be available from the time CS6 is released to December 31, 2012, says Adobe. Adobe's current release plan saw CS5 debut in 2010, followed by CS5.5 in 2011. With CS6 due in 2012, we can realistically expect iterative improvements for CS6.5 in 2013 and further overhaul for CS7 in 2014. Adobe Creative Cloud Adobe plans to launch its Creative Cloud alongside CS6 and claims that this will be its most comprehensive creative solution ever. Members will have access to all Adobe CS6 desktop applications, plus additional services, tools, community features, and 20 GB of online storage. Adobe Creative Cloud will also include Adobe touch apps for tablets - Photoshop Touch, Adobe Collage, Debut, Ideas, Kuler, and Proto. Creative Cloud members will receive continuous upgrades and updates to all products and services as part of their membership. Adobe membership states. Yes. You read it right. Adobe Creative Cloud subscription prices start at \$49 per month. Photoshop CS6 (beta) Adobe Photoshop CS6 will include a noticeably darker user system with rich cursor support to provide you with raw data about the tools you use. A magical image of Photoshop deblurring sneaking out of Adobe MAX 2011 could also find its way into Photoshop CS6. This will be especially useful for most photos taken with a mobile phone camera. Content-Aware editing Adobe has also demonstrated a feature called 'Content-Aware Wide-Angle Lens Correction'. This allows automatic lens correction to correct distortion based on a database of 600 camera lens profiles. This content-aware technology can also be used to make it easier to remove unwanted objects or elements in a photo. Watch this Sneak Peek video with Senior Product Manager, Bryan O'Neil Hughes, to learn more. Of course, the image deblur or lens repair feature may be missing from Adobe CS6 and will appear in Adobe CS7 instead. Adobe is careful never to say that its sneaks are ready to deploy. I'll tell you very bluntly, we're very early in [deblurring] technology, Bryan O'Neil Hughes TechRadar.com. There are a lot of people who are working on it, but it's a tough nut to crack, especially with the expectations that people have. When you show people a magic trick, people expect you to pass. Workflow improvements inbound Photoshop enhancements are not all effects-led. Adobe engineers do a great job of exporting/migrating preferences, workspaces, and settings for new versions of the software. Not only that, However, you can also expect some workflow improvements for layers/layer groups, as well as returning a contact sheet and PDF presentation options. According to CNET, Photoshop CS6 could also put more pressure on the DNG (Digital Negative) format. Improvements include faster raw preview and stove files that can be processed faster by multi-core processors. There will also be the possibility of lossy compression to significantly reduce file size.*** The Version of Adobe Photoshop CS6 was made available on 22

December 2010. Read more about it here. InDesign CS6ProDesignTools highlighted the handy InDesign feature called liquid layouts, which was displayed at the Adobe MAX conference in 2011. Liquid layouts are designed to automatically adjust layouts to any device you view. Check out the demo below: In an impressive sneak peek at Adobe MAX 2011, researcher Sylvain Paris showed off some stunning video netting technology that could eventually find its way into Premiere Pro CS6. In the demo video below, the eye is applied to the video to allow the editor to step inside the scene and literally look around in 3D. The software also allows you to change the focus and depth of field. 'Ooh and 'ahh's are definitely appropriate here. This is the kind of 'huge improvement' that we're hoping for in Adobe CS6. Flash Pro CS6There is also talk about a project called Monocle, which is aimed at helping developers optimize their Flash applications with access to extensive real-time data reporting. Expect it to be baked into the next version of Adobe Flash Pro.QUICK LINKS TO ADOBE CS6 REVIEW: Adobe CS6 review pagePhotoshop CS6 reviewAfter Effects CS6 reviewDreamweaver CS6 reviewFlash Pro CS6 reviewIllustrator CS6 reviewInDesign CS6 review review
