The syllabus, Etekcity Roverbeats Bluetooth. Amazon, Roverbeats Unify , 46, $20. The syllabus, MP3-MP3. Roverbeats Unify ' Bluetooth 4.0 ' and fast fast streaming with a range of up to 33 feet. The lithium-ion battery in the receiver can run for up to 10 hours on a single charge and works quickly via a USB cable. Unify can connect through standard audio jacks A/V, RCA and 3.5 mm, turning a compatible acuum system into a wireless streaming station. Along with traditional speakers, Unify can integrate with virtually any stereo, car radio, or home theater settings that can connect to the receiver. The Etekcity Roverbeats Bluetooth can transmit sound from any modern Bluetooth-enabled smartphone, tablet or computer, and has a convenient NFC wireless connection. After pairing one of your devices with a set of speakers for the first time through the receiver, re-pairing can be instantly done with a quick hand gesture: simply tap your NFC-capable mobile device to Roverbeats Unify. It will connect automatically and you are ready to start streaming. For just $20 on Amazon after a 46 percent discount, the Etekcity Roverbeats Bluetooth receiver is an excellent low-cost solution for your wireless audio streaming needs. The adapter currently has a 4.4-star user rating with over 1,600 customer reviews and is often listed among the best Bluetooth receivers. Etekcity includes a one year without worry warranty with the device as well. $20 on Amazon We aim to help our readers find the best deals on quality products and services, and we choose what we cover carefully and independently. Prices, details, and availability of products and deals in this post may be subject to change at any time. Make sure to check that they are still in effect before making a purchase. Digital Trends can earn commissions on products purchased through our links, which supports the work we do for our readers. Recommendations from Lifewire/Jason Schneider editors We have purchased the Etekcity Roverbeats Unify Bluetooth receiver so that our reviewer can thoroughly test and evaluate it. Keep reading for our full product review. Roverbeats Unify is a Bluetooth receiver from Etekcity that is unapologetically simplified. By itself it is neither professional nor con - it completely depends on what your expectations are for features and use. It's not a receiver for those looking for super high-quality codecs, premium builds, and an exceptional Bluetooth range. It's a great fit, however, for those looking for a no-frills Bluetooth receiver for a bargain basement price, one that packs a welcome, robust feature set. As is the case with most low-cost, off-the-label technologies, you're going to make some concessions in favor of a super-low price. Read on to find out what these concessions are, and They will make a difference to you. The Lifewire/Jason Schneider aesthetic of Etekcity is akin to the early 2000s take on the futuristic. The first thing we noticed when pulling the receiver out of the box was how to The thing is. It's only 48mm on each side, and only 24mm tall, the smallest Bluetooth receiver we've tested. To put that into perspective, it's similar in size to a smartphone credit card reader. This is a huge plus because it can easily disappear into your entertainment system (or pocket). In fact, the portability of this device is probably its strongest feature, which we will touch in a special section later. The aesthetics of Etekcity are akin to the early 2000s take on the futuristic. The design itself consists of a rounded square, built mainly of glossy plastic. The edges have small, cut-out, pill-shaped matte areas that contrast nicely with what is otherwise a budget look. The brand and Roverbeats Unify are printed in white right on top in sticky and oversized labels, and the main control interface button is surrounded by a blue LED ring (although this ring turns red if something is not connected). This device will look more at home in your car's stereo system than in a modern home audio system. One of the big drawbacks of this device is how basic the build is. The unit somehow felt even flimsier than we expected. An integral part of a device like this is that it is very lightweight (right about 1 ounce)) and portable. The downside of this portability is that since you move it a lot, you are more at risk of dinging it. The surface seems very prone to scratches, seeing how it is glossy plastic, and the case has quite a lot to give it. On the other hand, Etekcity included a fairly comprehensive 1-year warranty. Lifewire/Jason Schneider One is a big plus as just a receiver to connect. When more expensive Bluetooth receivers try to add a lot of connectivity features, sometimes it mudsitate the original setup (we're looking at you Bose). This one works well right out of the box. Just power it with a big button and it will go into pairing mode. Our phones and computers are all connected seamlessly as soon as the adapter was in pairing mode. Also, with Bluetooth 4.0, you get about 33 feet range. You don't get flashy controls, premium builds, or high-quality Bluetooth codeks, but what you get is a really solid portable

unit and NFC convenience, for a ridiculously low price. Because it's marketed as a mobile device, we'd like to see Bluetooth 5.0 for a more stable range (in case you use it for outdoor batches or in similar conditions), but it's a small nibble. What's really interesting to see here is the inclusion of NFC. Most Bluetooth receivers don't include this added featured because they are mostly designed to both install and forget home units. This one will Good with compatible Android phones as you can just tap the phone against it to adjust the pairing without jumping through the hoops. Anecdoteically, it worked. when we tried it with our Android device, but it's important to note that NFC can get a bit of a mess if you're trying to pair a second device-small gripe, but it's important to note. One drawback is the limited VS. on the back of the device you will see only two ports: one USB port for charging and power, and aux 3.5mm audio out. This means that you don't have a direct RCA option or premium support options such as digital optical ports. Fortunately, Etekcity includes both the standard 3.5mm Aux cable and the aux to the dual RCA adapter, right in the box. As far as the controls go, there's one, a big button on top of the power supply on the device and enter pairing mode. This button will power the device on or off if you hold it for a few seconds and will be automatically paired with the devices when you turn it back on. You can also use this button to play/pause tracks if you have it tucked into your pocket or console in your car. The focus is clearly on simplicity, without an application or additional controls. Lifewire/Jason Schneider Because there is a lithium-ion battery on board, the best use for Etekcity is in your car or on the go. On average, the battery holds the charge for about ten hours. The included charger has recharged the battery quickly- not surprisingly, given that this device is just a wireless go to music. Etekcity packs the standard A2DP protocol and will transmit audio via SBC Bluetooth codec. This means that you'll have a standard (and pretty unprofitable) compression level, not a huge deal if you're just playing MP3s anyway, and if you've used low-end (or even some high-end) Bluetooth headphones, you probably already have some experience with this codec. Our testing has given the exact sound quality that we expect and you won't notice much difference if you don't send this compressed Bluetooth audio to really high-end speakers. Etekcity sells for about $23. You don't get flashy controls, premium builds, or high-quality Bluetooth codeks, but what you get is a really solid portable unit and NFC convenience, for a ridiculously low price. Logitech Bluetooth Receiver : The obvious competition of Etekcity is this similar offer from Logitech, which offers the best build quality mostly at the same price, but lacks some Etekcity features. Avantree aptX receiver: There's a similar price option from Avantree, which trades in the battery to include more non-loss aptX codex. Bose SoundTouch Link: If you want something more premium and that will work as a Bluetooth receiver and hub for a wireless music system, this link has you covered much higher price). The final verdict is an easy boost to buy. What's amazing is that Etekcity has managed to give us a taste of premium receiver function for a fraction of what you you expect to pay. Outstanding as ten hours of battery life and the convenience of NFC make it not a head-soft for those who put on the move the versatility at the top of their list. If you want the best sound you need to look elsewhere, but otherwise it's a really solid block. Units. roverbeats unify bluetooth manual
