It features 6 lifts, 33 pistes and a landscape park with an air bag. There are 3 basic cabins and a rental building at the bottom of the hill. Lodges offer services such as lockers, toilets, food services and first aid. Known as the Racing Factory, Craigleith has an Alpine ski racing program, starting with U8 via U21, which has the largest participation in Canada. Craigleith also park teams that compete with other private clubs in the area. In February 2017, Craigleith will host the Canadian Snowshoe Championships on its famous Switchback track. Every year the club hosts the Podolski SG Race Cup Cup by Nick Soricic, as well as Alpine Ontario and FIS sanctioned races. The club is open from Wednesday to Sunday during the ski season. Corporate and private events (ski days, weddings, etc.) can be booked through the club office. You can help Wikipedia by expanding it.vte extracted from January 5, 2020 - Avalanche shocks Craigleith Ski Club in the Blue Mountains. It happened Sunday afternoon on a millennial club black diamond run, when much of the snow on a steep crest run separated and slid down the hill creating an avalanche effect of about 40 feet. Jeff Courtemanche, general manager of craigleith Ski Club explains the evidence that the hill may slide was visible Saturday morning, and the hill was closed as a precaution. The slide begins as a crack through the hill, the weight of the snow combined with the lack of additive to the ground allowed it to fall and slide. Sunday morning it was a 4-foot wide crack that slid to about 40 feet by 9 a.m. Because several trails in our V-Hill neighborhood are steep and snow-covered we closed the entire area as a precaution, Courtemanche said. The snow slide at Craigleith Ski Club was renovated on Monday and the hill will be Skiing at the weekend, courtemanche assures. Snow slides like this are common in the area, especially on steep hills with man-made snow. Fortunately, no one was injured as the run was already closed due to concerns about conditions. Kurtemans also noted that Craigleith's success in snowborough was also their drop in this case, as all other ski areas were unable to have their steep piste covered with snow and as such would not have any risk of a slide. Snow slides have happened before in the Collingwood area because the Blue Mountain Resort, Alpine and Georgian peaks had them, says Kurtemanche. Craigleith has had them in the past and they are usually fixed during the day. Not that common, but as snow improves at the beginning of the season the risk of it happening increases. as I said before, if you don't have snow, then you don't have a risk. According to the UBC Department of Earth, Ocean and Atmospheric Sciences website, the avalanche begins when a layer in the snowpack becomes congested and fails. Two typical ingredients are: (1) a pre-existing weak layer and (2) a trigger. The trigger can be natural (e.g. new snowfall, new snow with wind, or rapid temperature change), or human (skier/snowboarder/snowmobile add weight). In most slides where a person is caught or killed, they or someone in their party are the trigger. But the one that occurred in Craigleith is arguably a less common variety that the UBC EOAS department calls a wet avalanche slab. According to UBC, the release of the slab is the result of meltwater or rain seeping through the snowpack, and the already existing weak layer becomes moist enough that its connections lose their power and fail. Wet slabs are most common in spring, when snow cover experiences, for the first time in all season, several nights in a row above freezing temperatures. Craigleith Ski Club, located in 1958, is a private ski club located in the heart of the Blue Mountains, Ontario. In winter, 32 picturesque groomed trails in various places are complemented by snow trails and a bright social calendar. Summer activities include tennis courts and a swimming pool located at the foot of the hill in spectacular surroundings.
