

A luxury, natural – a new generation

Z73 is a luxury, natural, milled leather made from superior rawhides.

It has an attractive softness with a good feel and a slightly satin finish. Its natural grain results from a combination of an up-to-the-minute tanning technique and a milling process performed at the perfect temperature, without mechanical embossing. Full use is made of natural features (scars, folds from fattening, as well as differences in structure and colour) and they can be found in all pieces of furniture. Healed brands are also used on the back covers. These features are not recognised as reasons for complaint.

The thickness of the hide of Z73 is 1.1 – 1.3 mm.
