Cara belajar coding pdf

Are you interested in learning coding? But how to confuse this should begin with? Find the answer through this article. Coding has changed some human habits in this modern era. A wide range of applications, whether desktop, web or mobile as a result of coding processes, are so influential for human survival. Call it Google, Facebook, Instagram and Youtube. These four apps are very almost every hour we use for a variety of purposes. coding is so popular, automated code-writing work is also very pleasing for fans, such as Android Developer and Web Developer. This is a great opportunity for those who want to continue the world of programming. Especially for the people who are now engaged in peace with him. Don't miss this opportunity. Some questions about the source of coding: educba.com before you go to coding training there are some questions that are often asked by beginners. At least 3 questions are what I often hear: What is coding? What does coding do? What is a programming language? What is coding? Coding is the process of writing code in such a way that it becomes software, application, or Internet. Android and all the apps we use on smartphones are the fruit of coding. Another term for coding is ngoding. Usually students or people who indulge in the world of programming often use the term ngoding. For more information, please read the article below: 5 Minutes Understanding What is coding What is the coding function? The main function of coding is to create a program of applications for computers, smartphones, or can be accessed via the Internet. In addition, by coding, we will also get different things such as: The Practice of Precision Brain Skills Development Skills and so on What is a programming language? Programming languages are codes that need to be written to create a program. For example, we want to create an android application, then the programming language used will be Java, Kotlin or Dart. If we want to create a web application, the programming language can use Javascript, Ruby and more. Find out more, please learn from the following article: 16 examples of the most popular programming languages 5 things to note before you study coding Source: insights.dice.com Set a goal of learning without purpose will make us confused and have no priority. Now try to answer the question below: What do you want to create with coding? Which apps are based on Android, iOS, Web or Desktop? What profession would you like to achieve if you have mastered coding? Android Developer, Front End Developer, Full Stack Developer, or Others Why Is It? ... Because knowing the goal from the beginning, we will choose the right programming language. So when we start learning, we don't need to learn all the programming languages. Only one thing, first like Java and then train until really owned. Is choosing a programming language already defining the goal? It's time to choose the right programming language. Programming language to create Android applications If you want to be an Android developer or want to create an Android app, then the programming language that you can learn: Java Kotlin Flutter C and others General currently developer Andrdoir uses the Java programming language or Kotlin to develop an application with Android Studio IDE. Programming languages to create other web applications, as well as to create web applications. Usually used programming languages: PHP Javascript Python Ruby Golang and others Usually they also use certain frameworks, so that the work can be completed efficiently and efficiently. We can use programming languages such as Java Vb.Net C and other programming languages to create iOS applications while developing apps that can be used in iPhone programming languages used by Swift with a special IDE called XCODE. Yes, with Flutter or Responsive Native we can also create apps for iOS. Preparing mentally and consistently achieving experienced levels in coding certainly takes some time. We have to work hard and be consistent to achieve what we want. Do not study all day, but do not study only several times for a long time, for example, once a week. It is better to set aside a special time each day to learn coding. 45 minutes or 1 hour each day, I think enough to learn coding. But if you don't have another stressful life and want to see results quickly, then part-time learning should be added. Again don't give up easily and have to do it every day aka consistently. Learn English Full coding tutorial almost everything on the external site and it is obviously definitely using English. This requires that we at least understand what is conveyed in the tutorial. If you understand it or it's good, it's good. But if it may not be good to learn a little until so that we are not too empty when studying programming textbooks that use English. Learn coding on the basics Learn the programming language you want to learn from the start. Usually when studying coding at the beginning we have to master: Structure and rules of writing programming language Variables and data types Use Syntax Bug Cloud logical operators and many other 2 Methods Coding for beginners there are several methods of learning coding. Each method does not apply to everyone. The techniques we can take to learn coding include: Learning online Learning to learn online learning to encode online programming online is usually accepted by people who want to learn self-taught or alone through the Internet. The source of his training can be through: Android Application Blog Youtube Web interactive web provider online coding training course through Android App That can make people who are quite comfortable to learn only through the android smartphone that it has. There are 4 coding training apps that have the most users today: Programming Hub, SoloLearn, Programming Hero, and Mito. Reviews and how to use it can be read through the following articles: 4 Most recommended coding learning apps learn through Blog Ii is to learn programming through blogs. Nowadays there are many special blogs that discuss coding tutorials. As badoystudio.com article contains android programming tutorials using android studios. In codecademy.com other interactive learning sites are: Freecodecamp Codeschool Treehouse CodinGame Although those that use Indonesian language there are also codepolitan and codesaya, but there are only a few categories of programming languages. Learning through the Youtube channel is now not just for entertainment media. But we can also use it to learn coding. There are many channels both from home and abroad that present coding tutorials. Youtube channel that discusses learning about coding from Indonesia, namely: Sekolah Coding web programming Unpas Programmer Now and more If you want to learn coding free aka modal kuota doang can be YouTube can be the right choice. As long as consistent and serious God will give results will be considered, despite only learning through YouTube. Find out offline coding Source: The next method to learn programming in offline learning. Some of the ways that can be taken to learn coding offline through Printed Books or E-Books Take a course or bootcamp Learning through printed books or books If you are the type of person who likes to learn through printed books, please go to the nearest bookstore and look for books that discuss basic programming. In addition to printed books can also be through e-books (form of pdf files). If you are interested in learning android programming we have also provided 4 books teaching android studios for beginners. Alhamdulillah there are currently about 1000 people who study it with positive reviews. Taking a course or bootcamp the disadvantage of learning coding online is that we can't come face to face and learn directly from his mentor. So if you want to learn directly from the teacher offline the course is the right choice. Then what is Bootcamp? Bootcamp coding is a course or training program with materials that have been organized with the needs of the industry. The duration of coding training in bootcamp coding is usually quite short. That doesn't mean the day is right away. The duration is usually 3 months or 6 months. With a complete training system every day, kecual weekends. But unfortunately, the cost of following Bootcamp is not cheap Loh. We must be prepared to spend tens of millions. Bootcamps are usually already used by startups or specific companies. So when we graduate we can be directed to work for a particular technology company or startup. Learn HTML Coding Source: HTML isn't really a programming language. But to learn the development of the website basics to learn HTML. HTML is used to develop the start of a website page. The basics of HTML that will be explored are: The tools used by the Basic Properties of the HTML Document Structure Using text formats of HTML Paragraph formats in HTML Creating lists or lists that include sequential, non-consistent lists, and a combination of both website responsiveness and more you can learn the main material above on the following links: 15 minutes understanding What is HTML

In depth We also summarize some HTML tags that are often used at the time of development of the website. Here's the link: 65 HTML tags with features and examples of their use. Learning a programming language coding with 3D 3DS is one of the easiest languages to learn programming. In the training program of coding training in vocational school, it is this programming language that has learned. In addition to vocational schools, there are still many campuses with information systems and computer science techniques that use the NHS to learn basic programming languages or object-oriented programming. If interested in learning, make sure to stream learning like the following: Understand how C C programming tools are used Visual code, sublime text, and other Understanding programs and compilers Understanding processing, linking and compiling Understanding print and console Mehamai variables and declarations Understand data types and more One of the tutorials from the YouTube channel is pretty good to discuss C , namely an open class channel. Learn Coding for Kids Can Kids Start Learning Programming? For example, primary school children. Children can begin to learn coding or programming. But this is not how adults should be serious and need high concentration. Instead, the child should go through an easy-to-understand approach to logic. Don't get complicated right away, and they won't know coding anymore. To hone coding skills from a very young age, we can teach it through coding training sites for children that are interactive and interesting, among other things: Scratch.com Tynker.com Waterbear.com Cover Is a brief description of the initial guide to coding learning for beginners. Hopefully this is useful and be sure to share it with friends who want to learn coding as well.
