It sets the standard for impeccable scholarship, precision and strong coverage of ecology, evolution and metabolism. The 15th edition seamlessly integrates the most modern sciences, focusing on molecular biology and genomic revolution. It introduces a flexible, more streamlined organization with a consistent level of detail and a comprehensive artistic program. The key features of the more annotated shapes clearly illustrate and explain all the key metabolic pathways and molecular processes. Evolution as a framework uses evolution as a comprehensive theme to combine microbiological concepts and create a framework on which students can build their knowledge. Renewed 21st century microbiology improves training in global climate change, biofuels and microbial fuel cells. The improved art curriculum improves learning with three-dimensional performances and bright, attractive colors. The expanded chapters of molecular microbiology and immunology deepen the discussion of eukaryotic and archeal genetics and reflect the kinship of the genetic flow of information. An orderly discussion of immunity with improved detail between innate and adaptive relationships helps students understand the complexity and specificity of immune responses. The reorganized content of the end chapter is better helped by the student's review and evaluation. The revised chapter of Microbiology Now demonstrates current microbiological research, contextualizes the content of the chapter and adds relevance to visual content.
