The `*serial*` is case insensitive and will be parsed as a normal string. A unique serial is assigned to the device on initialization, and changes to it should only be made when restoring from backups." type: string sensor: description: |- The raw JSON sensor data that will be imported in this object. The field keys of the JSON sensor data MUST match the field names of the `*query*` object. If a sensor does not exist in the data file, the `*sensor*` field is ignored. This field contains the following properties: *

`*temperature*`: { number } A temperature value in Kelvin or Celsius. See [Celsius` and `Kelvin`]/(documentation/system/celsius-and-kelvin/) for units. `*location*`: { string } The [UUID of the location]/(documentation/storages/storage-locations/). `*measurement_time*`: { number } The time of the temperature measurement in [RFC3339]/(documentation/datetime/rfc3339/) format. If the sensor provides only the time of the reading in seconds, this MUST be set to the number of seconds elapsed since 1970-01-01T00:00:00Z. `*temperature_value*`: { number }

The temperature of the device. * *humidity*: { number } The relative humidity of the device. * *measurement_duration*: { number } The duration of the temperature measurement in seconds. * *physical_device*: { string } The [UUID of the physical device](/documentation/storages/storage-locations/). type: object stored_data_location: 520fdb1ae7
