A: Dies is not just a low-bit video processor - it can also be a powerful watercolor-style rendering engine that can be used to perform rasterisation to perform animation of 2D and 3D graphic effects. You'll find a small link to the project on the Dies project homepage: You'll also need to build the iOS SDK, but with the Xcode 6.1 update the PPC support in the SDK is now deprecated. (If you were previously building for the 32-bit "universal" architecture then your iPhone will still be able to run the app). That said, iOS is not a very performance-intensive platform - although you can create small 2D games you will find that there are much more powerful platforms out there, such as the App Store. Q: Como funciona este script do Google Maps? Estou usando este script do Google Maps pra criar mapas no meu site, mas não estou sabendo por onde começar. Preciso ativar e desativar o script quando acesso determinado ponto do mapa. Como faço isso? Script: // Start Map function initialize() { var latlng = new google.maps.LatLng(-34.397, 150.644); var myOptions = { zoom: 14, center: latlng, mapTypeId: google.maps.MapTypeId.ROADMAP }; map = new google.maps.Map(document.getElementById("map-canvas"), myOptions); } // Zoom to the Porto, Portugal google.maps.event.addDomListener(window, 'load', initialize); HTML Tente algo assim: var latlng = new google.maps.LatLng(-34.397, 150. 520fdb1ae7
