

# WE.SHARE! - The life we share -

## S H A R I N G !

In the last decade, this is the word which is shaping most of our decisions in terms of how we are **designing** our society.

We can now **share** electric autos and scooters in order to reduce **CO<sup>2</sup>** emissions, we share our public transport system, the food we order in a local restaurant near our main office, and we are sharing our living space, by discovering new ways of co-housing and co-living.

So, what if we explore the possibility of this sharing system in relation to our **working spaces?**

**What if**, instead of having only carsharing, we could also create **office sharing**, that we could rent for the exact time we need them? Just easy as open your phone, and find the nearest box around you, and the one which fits the most your demand. All of this directly from your **App**.

Not just a **Co-working**, that you have to pay each month, but an occasional space, that you can rent any time you need it, without the complications and the cost of a Co-space. If you are **student**, and you don't like to spend all your time working in the university facilities, you could probably prefer doing it near the beach. Even if you are an **Independent worker**, who sometimes just wants to work out of their home, and eventually, make some contact.

Or if you are just **passing by**, and you prefer to work from one of the stations with a stunning view of the city, rather than from the airport.

**Boxes** all around us, which could possibly cooperate with the city center in order to create a common view of a smart or even **resilience city**.

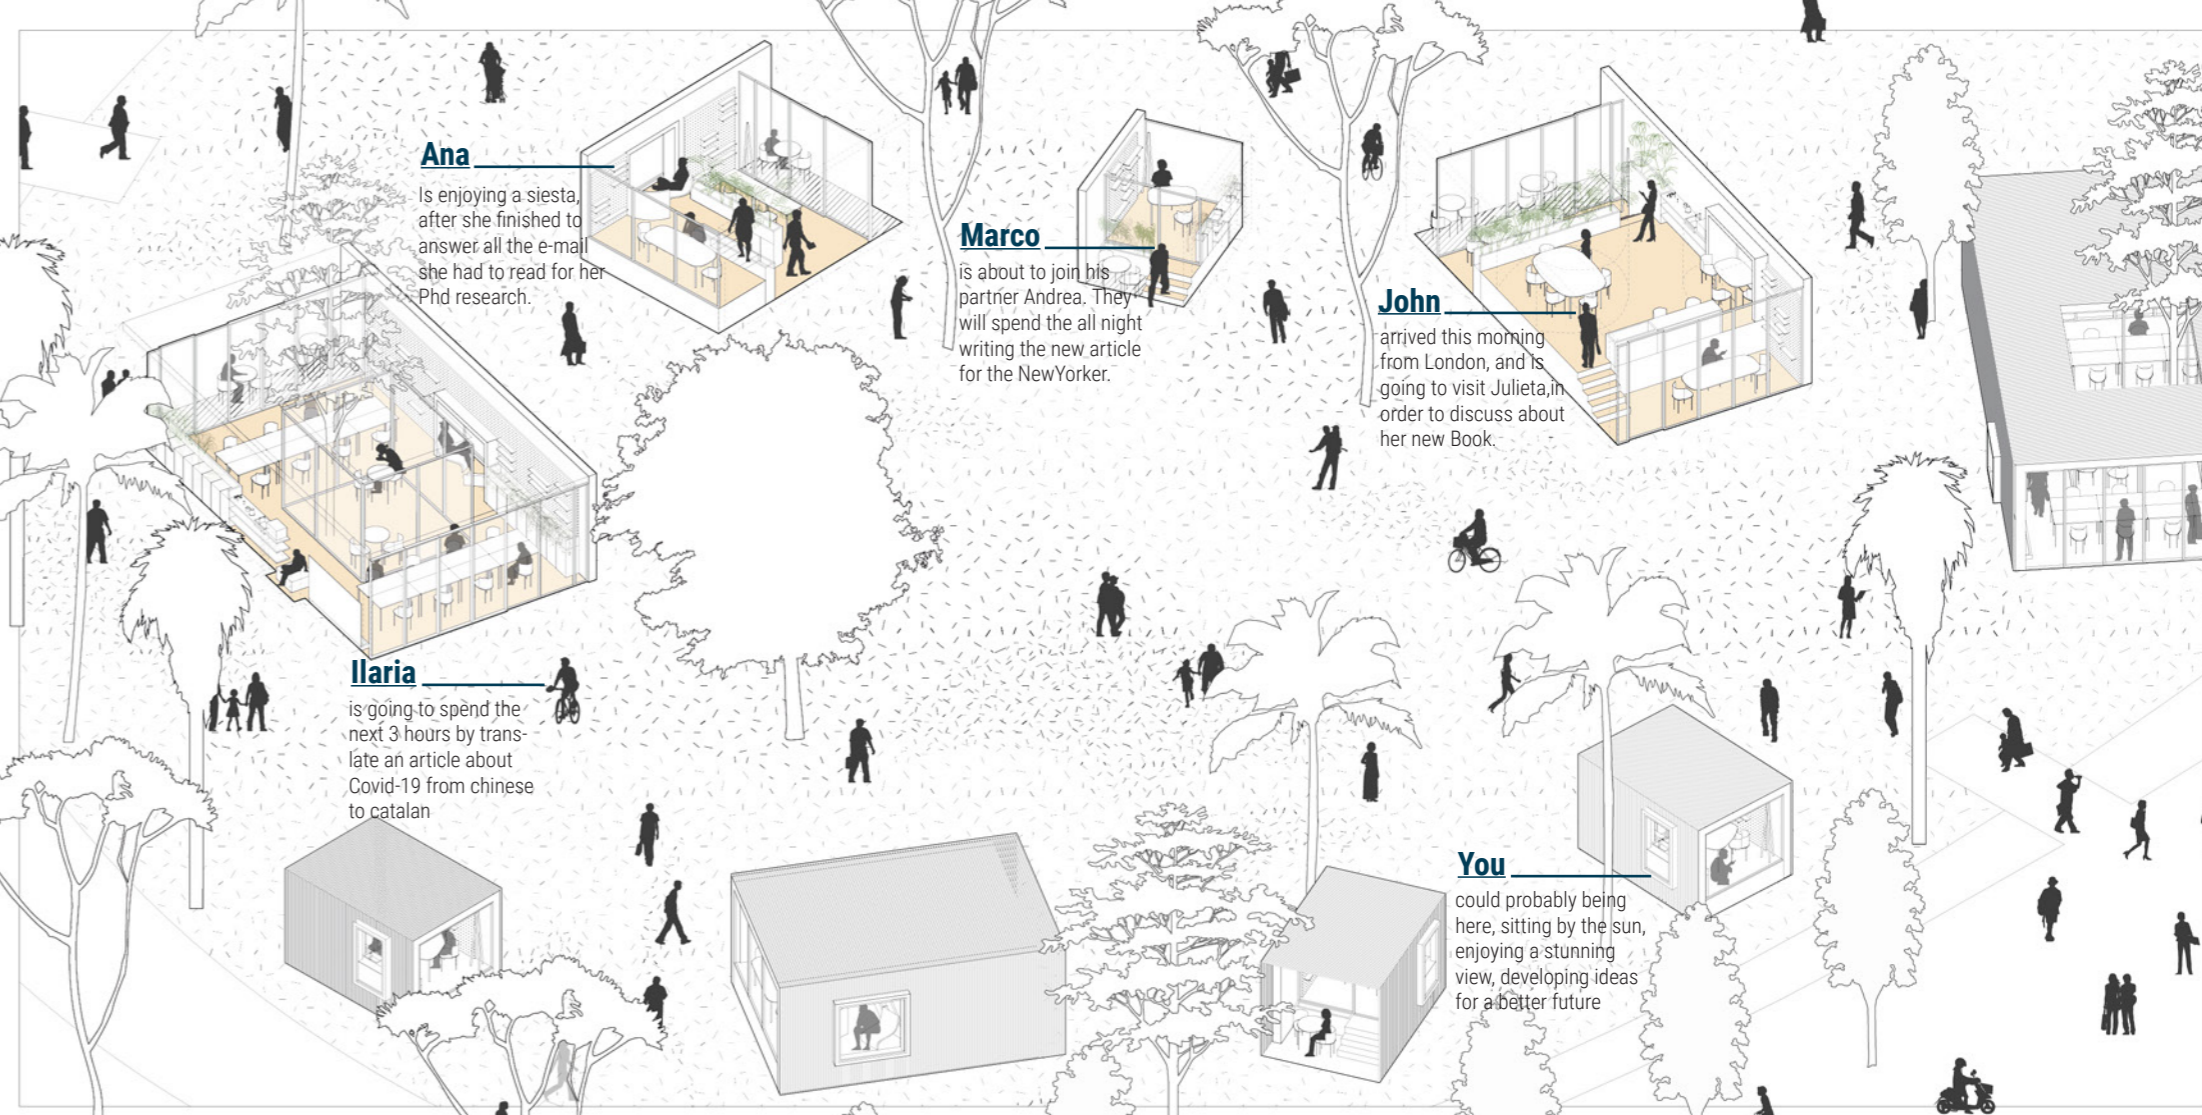

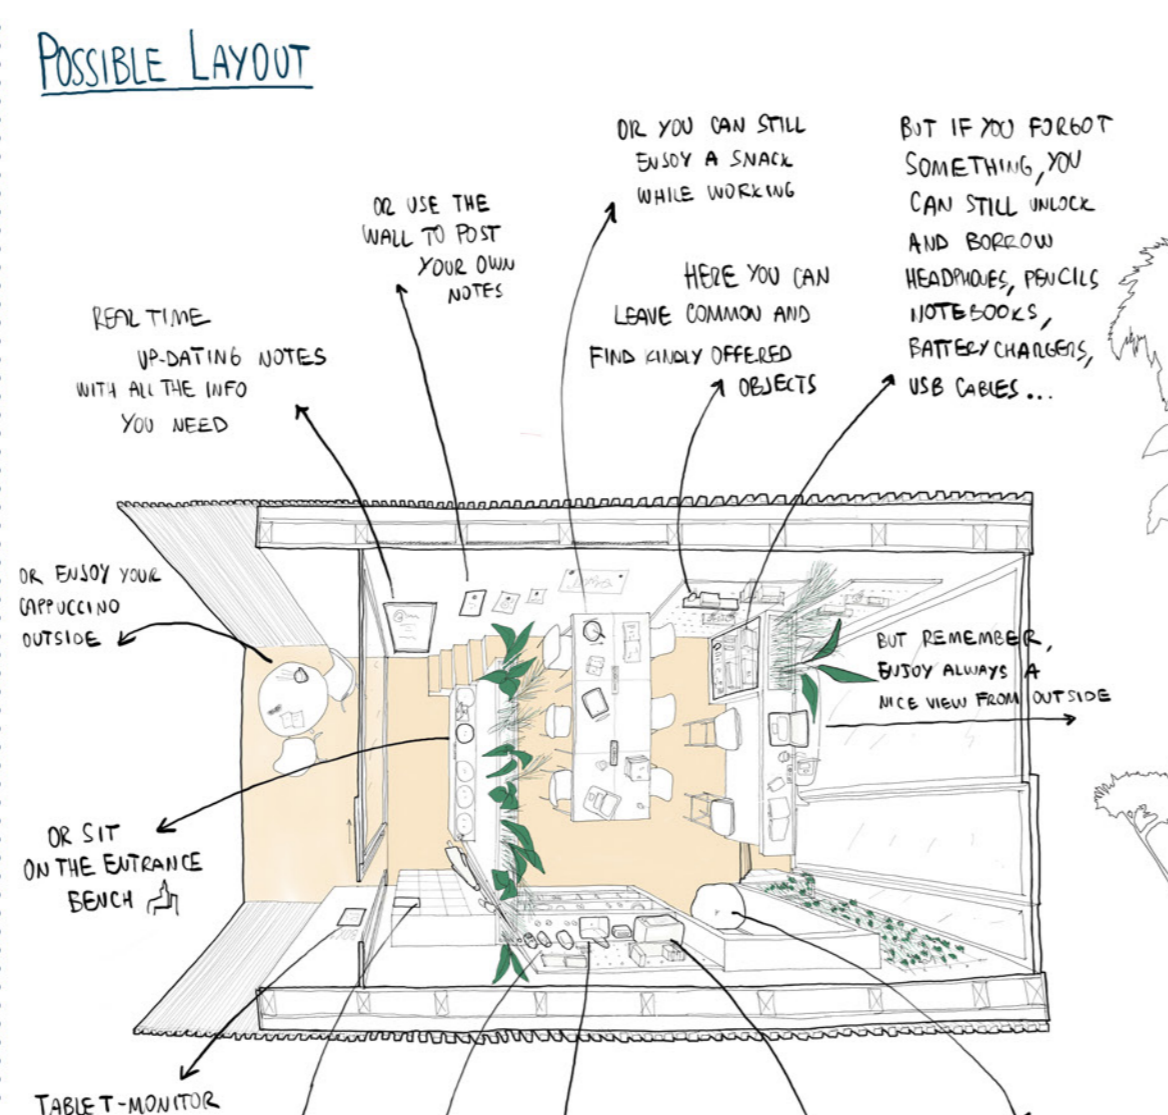

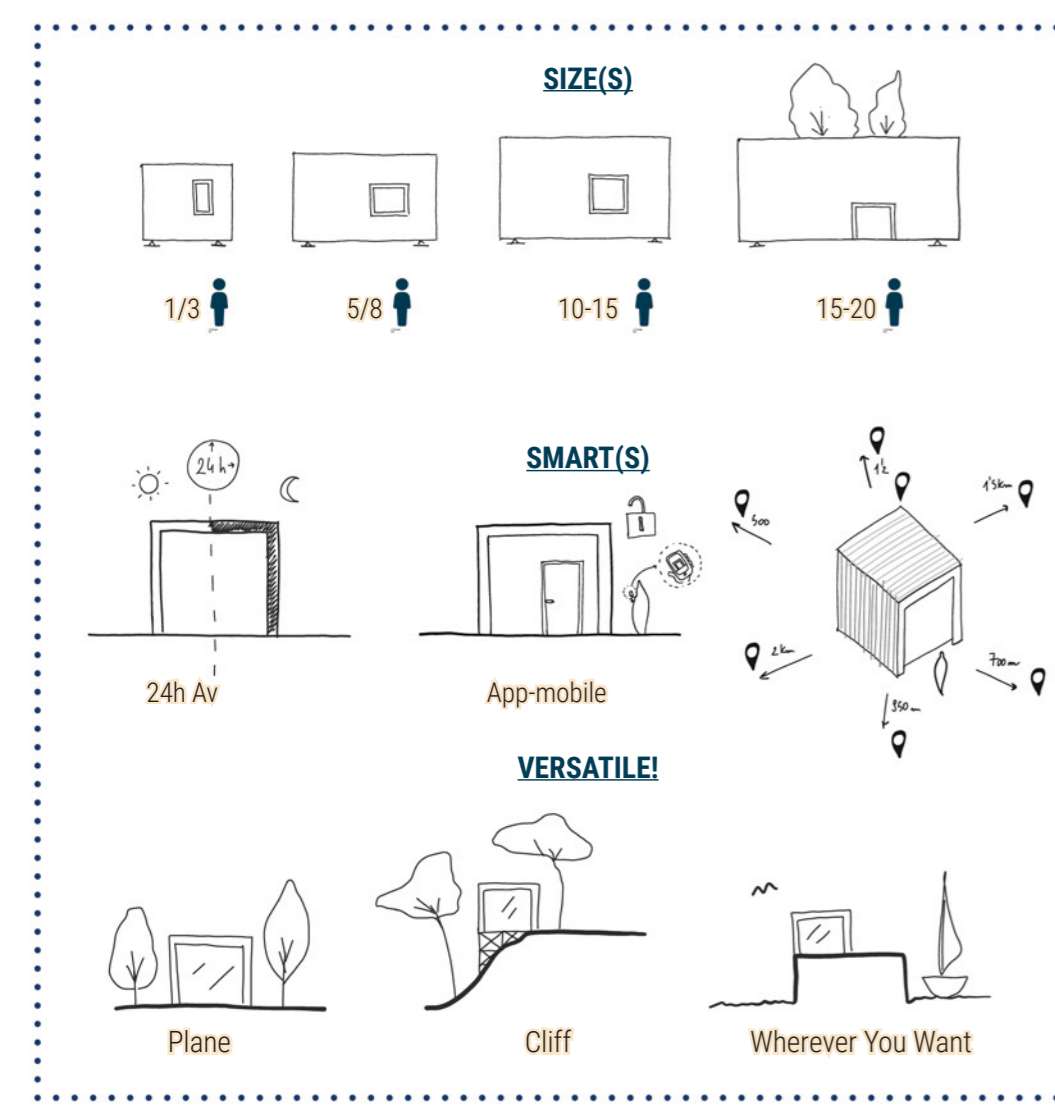

Boxes that will be placed not only in strategic position, but also creating new spaces and opportunities to make **communities** around them, by trying to get a close contact with the surrounding **nature and urban context**.

We are living a struggling moment of our recent history, in which the word and the concept of **sharing** seem to be in danger as our own life.

Despite the **Covid-19** crisis, we firmly believe that we will need to collaborate with the new solutions for the future that the European Commission will luckily provide. Most of us are currently working from their home, but this could only be an exceptional solution, because the most, are not working anymore.

As we are doing right now, we will adapt ourselves as human being to survive, but we are convinced that we don't have to lose our identity of **humanity** as a big living **design network**, and we must not forget that we will have to work together and not separately in order to find a future solution.

Will our boxes be able to detect with a body temperature scan, or will there be, for a certain time, Covid-19 **immunology license**, or Covid-19 free pass, or free area, (Or Covid-19 mild condition working area), nobody still knows. We offer our idea and concept, in order to not forget some of our before-Covid-19 eco-friendly principles and goals, because we will have to restart somehow and build together **"TheLifeWeShare"**

**3 ENJOY YOUR STAY**  
now you officially a member of our community "TheLifeWeShare".  
Enjoy your time in your box: seconds, minutes, hours, days, nights. The best solution that fits your demand.

**2 OPEN THE BOX**  
once you arrive, just get your mobile device near the entrance, and the sliding doors will automatically let you in!

**1 FIND THE BOX**  
the first step, join the community by downloading the application and signing in. the second one, find the nearest box in the map and go!
