INTERNET SOLUTIONS PROVIDER BEYOND YOUR EXPECTATION

For enterprises seeking to grow at a high speed

H7 Connect - Effective Internet solutions

H7 CDN - Website acceleration services targeting
Chinese and Asian markets

Just do your best to develop your business

As for the Internet, leave it to **HIERO7**

HIERO7 makes complicated things easy!!

We know very well that what each enterprise expects is network services with both safety and quality. When an enterprise expands its business, it needs a reassuring and reliable network as its best backup force.

HIERO7 is an Internet solution provider established to meet the needs of enterprises. Our technical team, consisting of top network engineers, is dedicated to building up more stable, efficient and secure Internet services that are easier to manage and use.

HIERO7 provides high-level security protection & simple management mechanisms, as well as superexcellent flexibility of use. All the enterprise needs is only to connect to the Internet, and all the rest will be completed by HIERO7!

Exceeding your expectations is the goal of HIERO7!

H7 Connect

Effective Internet solutions

Super performance

High-quality dedicated lines, bandwidth assurance, more than 300 monitoring points, active detection of network quality, and 24/7 uninterrupted stability.

Ultimate security

Active DDoS protection, automated intelligent detection and real-time alerts.

No need for management

Automated management, proactive optimization and adjustment of backbone network performance, so no need for management on the client side.

Does your company have these problems?

Unpredictable cyber-attacks...

Sudden network interruption...

Tedious external network connection management work...

Unbearable network recovery speed...

H7 Connect effective Internet solutions

Handles the complex parts for you, and lets enterprises securely enjoy stronger competitiveness brought by the Internet

Types of enterprises suitable for H7 Connect

- E-commerce platform, entertainment content platform, live-broadcasting platform, online game services, financial services, network media, enterprise website, etc., and any enterprises that need stable and safe external network connection quality.
- Various types of enterprises that enter the Chinese and Asia-Pacific markets and are in urgent need of optimized Internet services aiming at China and the Asia-Pacific region.

Super performance, Rapid deployment

Powerful Support :

- Support all TCP protocols to provide the highest flexibility of use.
- Support multiple-site access, virtualization access and diversified interface modes, and provide enterprises with rapid deployment capabilities.
- Support the major cloud services; suitable for data centers.

Powerful Coverage :

- In view of the enterprises' needs for operating in the Chinese market, it comprehensively interconnects with China Telecom, China Unicom and China Mobile, and has 100 percent coverage of the Chinese market.
- Focus on the network optimization for the Asia-Pacific market, and provide enterprises with the best network quality.

Powerful Optimization :

- 100% uptime has been maintained since our establishment in 2016.
- More than 300 monitoring points have been set up; the network quality can be automatically detected around the clock.
- The monitoring center is monitored and managed by engineers 24 hours a day; these engineers actively solve problems and maintain the highest efficiency of the network.

Multiple Deployments :

H7 Connect provides multiple-deployment methods include:

- DC : Direct Connect (IP Transit / Internet Circuit)
- VC : Virtual Connect (connect with large cloud service providers)

Ultimate security Just like watertightness

Strong protection :

H7 Connect possesses active DDoS defense technology. The integrated blocking technologies include: basic features, behavior patterns and slowdown of a large number of attacks, and filtering attack packets at any time.

Smart security analysis :

Conduct automated intelligent detection of various threats to information security, immediately and automatically transfer attacks to the network protection and cleaning center for analysis, provide real-time alerting, and reduce human negligence, so that the client's service is not interrupted and operating losses are avoided.

Comprehensive redundancy :

Provide full-automatic backup as well as fast and automatic convergence of the best routing, maintain the best quality of service, and give consideration to both security defense and network performance. 2N+1 backup provides the highest reliability.

Exceedingly simple management Control complexity with wisdom

Simple deployment :

Clients do not need settings, and networking can be enabled in a short time.

No need for management :

Through intelligent monitoring, H7 Connect is responsible for all external network connection management, monitoring and adjustment work. Clients do not need to manage them.

The best Internet advantage is always fast speed.

H7 Connect provides enterprises with faster access speed and ultra-low latency, helping enterprises to achieve greater competitive advantage.

H7 Connect brings to enterprises :

- Multipoint access
- Lower latency
- Ultra-low packet loss

Reference values of H7 Connect access speed to regions in China

Latency	
To Beijing	< 50 ms
To Shanghai	< 30 ms
To Guangdong	< 30 ms

* The source of the above data is based on Hiero7's monitoring PoPs.

H7 CDN

Website acceleration solution aimed at the Chinese market

Strengthening the advantage when entering the Chinese market

Deploy PoPs in the Chinese market, increase the website content delivery speed, and greatly enhance competitiveness.

Excellent flexibility of use

Clients can make flexible configuration by themselves, and adjust or optimize it at any time to meet the operational needs of their websites.

Higher performance and greater economic benefits

With strong support ability, website operation is not limited; SSL certificate is provided free of charge; one-stop for purchasing all services.

“What is Content Delivery Network (CDN)?”

CDN is used to transmit videos, pictures, applications or other files to the user via the nearest CDN PoP server according to the user's location network, such as a country or region, so that remote users do not need access to remote server websites. It achieves high performance, is scalable and provides low-cost network content services.

Strengthening your advantage when entering the Chinese market

In case of access to websites, only a few milliseconds of delay may result in the loss of a large number of users!

E-commerce service, game platform, network media, financial service platform and any enterprise that needs to deliver online content in real-time all need faster website access speed in the Chinese market to retain users.

Aiming at enterprises entering the Chinese market, H7 CDN provides CDN services with higher performance, higher flexibility of use and higher economic benefits to ensure that enterprises can have competitive advantages!

Advantages of using H7 CDN :

- Significantly improve website service access speed, and provide closer CDN PoP to deliver content data to users.
- When a large number of users are online in a short period of time, ordering more CDN PoPs can immediately accommodate a large number of users online and reduce the load on a single server.
- Provide more bandwidth to deliver more real-time website services.
- Regional access reduces the number of e-commerce servers that enterprises need to build in each region.

Excellent flexibility of use

H7 CDN provides greater flexibility of customization, so that clients can define the rules by themselves at any time according to the operational needs of their businesses, including :

Define Cache Rules by yourself

Clients can follow their own website content features, or place files which do not change regularly (e.g., JPG, PNG...) on H7 CDN server, so that users can access the archives and contents of the website from the nearest H7 CDN server and reduce the bandwidth use of the main website server and the host load.

Self-defined settings for advanced security

Clients can conduct customized settings directed against certain origins, path signs or user-agents so as to more effectively prevent intentional attacks.

Define the black and white list by yourself

Clients can define the black and white list by themselves in accordance with the company policy for basic protection.

Higher performance and greater economic benefits

H7 CDN provides more powerful support, so the website operation is unlimited :

- Support HTTP/2 and HTTPS
- Support URL redirection function (Code: 301,302)
- Support Gzip compression function to enhance response speed

CC attack protection options :

Directing against HTTP(S) flood attacks, clients can customize settings at any time to achieve the best defense effect.

SSL Certificate is provided free of charge :

H7 CDN provides free SSL Certificates; clients do not need to buy them separately, so a large amount of budget can be saved.

Maximum freedom :

H7 CDN provides clients with the maximum freedom of use. Clients can control and manage it by themselves, and conduct various customized settings, so it has excellent flexibility of use.

Exceeding your expectations is the goal of HIERO7!

DDoS Protection / Web Acceleration / Network Optimization

Make things simple
