When you get tired of playing the game you can sell the items, get your proceeds and go back to playing the game. This is a low risk, high profit business, with the potential for super-profits. Welcome to the “Fastest Growing Business in the World” that is the Game Super POTATO BRUH and, we are looking for new members to join our team.Q: How to optimize this jQuery function that scrolls to an element This question has been asked a few times on SO, but I'm still having trouble getting a solution to work. I'm not sure where I'm going wrong. `$('.scroll-up').click(function() { var top = $('.scroll-target').offset().top; var h = $(window).height(); if (top + h > $(document).height() + $(window).scrollTop()) { $('.scroll-target').scrollTop(0); } });` Basically, I'm looking for a solution to have my element's scroll to the top of the window after clicking a button, so when I click a button again, it returns to the top. UPDATE This worked for me: `var top = $('.scroll-target').offset().top; $('.scroll-`

---

```
target').animate({ scrollTop: top - 60 }, 1000); return false; }); A: It looks like you are calling animate twice. var h =  
$(window).height(); if (top + h > $(document).height() + $(window).scrollTop()) { $('scroll-target').scrollTop(0); } $('scroll-  
target').animate({ scrollTop: top - 60 }, 1000); If you 520fdb1ae7
