Dell s2340m led

Top review All reviews: Katherine Walter1.0 out of 5 starsNot worth considering in the United States on November 9, 2018A whole time of feedback, the photo was terrible. If the picture looks bad, who cares about accuracy? I bought this looking to upgrade one of my monitors, and I have to say, Dell IN1910N 18.5-Inch Flat screen flat screen that I still seem way better than this one, even if it is smaller. I had intended to use this product with my current AOC 20 display, one for gaming, and one to watch movies at the same time. And after placing them side by side, the old monitors look particularly better than the new Dell. Seller (ANTONLINE) advertises this product to have a dim screen with Anti-Glare, and all I can say is that it looks dull and as if the whole screen has a glare. The seller did not refund the entire amount I spent, so all in all, this is a bad buy. Bad if I kept it, and bad because I haven't seen all my money back (and the seller has yet to answer). Try a model and seller. 1Description2Virtually Borderless3Wide Viewing Angles4Clarity5Customizable Color6Full HD Resolution7Enhanced Viewing Comfort8Versatile ConnectivityThe S2340M 23 Widescreen LED BACKlit IPS Monitor from Dell is ascreen wide LED backlit IPS monitor complete with 178° horizontal and vertical viewing angles.
