## **HOW DO WE MEASURE SECURITY?**

METRICS defined by STANDARDS/CERTIFICATION SCHEMES

## CYBER SECURITY AND RESILIENCE SYMPOSIUM

TOWARDS A RESILIENT AVIATION CYBERSPACE

AMMAN, JORDAN | 15-17 OCTOBER 2019

-GSMA IoT

—GP TEE

—CC cPP

**SOGIS** 

**Certification Standards RECOGNISED** —CC std what metrics? FIPS 140-2 ---CSPN \_\_\_\_CPA **FORMAL COSTS** —FIDO L1 —FIDO L2 —UL CAP/2900 -PCI PTS —UL LSP **—**IOTSF **LEVELING SCOPE** 

**OBJECTIVE** 

## **HOW DO WE TRUST THESE MEASURES?**

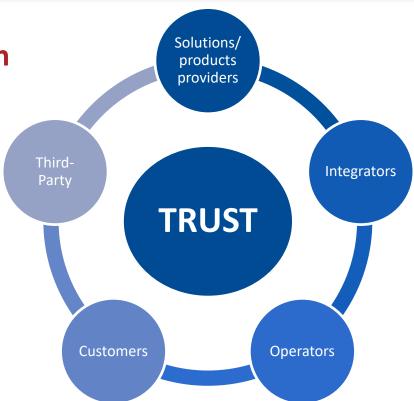

TOWARDS A RESILIENT AVIATION CYBERSPACE

AMMAN, JORDAN | 15-17 OCTOBER 2019

## Trust **Definition**

#### **TECHNICAL**

(assessment, review, validation)

#### **LEGAL**

(regulations, contracts, commitments, liabilities)

#### **SOCIAL**

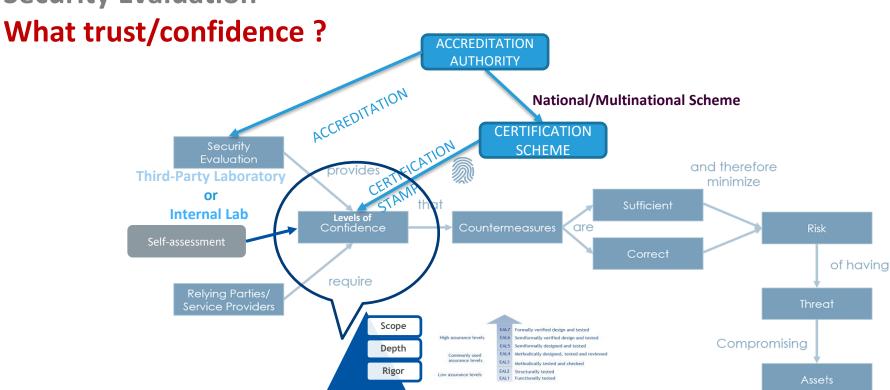

(reputation, transparency)

AMMAN, JORDAN | 15-17 OCTOBER 2019

## WHAT IS THE PROBLEM WITH EXISTING IT PRODUCTS CERTIFICATION?

TOWARDS A RESILIENT AVIATION CYBERSPACE

AMMAN, JORDAN | 15-17 OCTOBER 2019

#### Internet of Things

#### **Problems in Certification Practices**

- Evaluation Lab
- CC consultancy (optional)
- In-house Evidence development
- Site visit expenses (optional)
- Travel Expenses (optional)
- Equipment Costs
- Lost opportunity
- Certification Scheme (ANSSI -> FREE, BSI -> 2,5K€ to 12K€)
  - → Evaluation Lab Examples of Fees:

• EAL 2: 80K€ → 150 K€

EAL 3: 120K€ → 200 K€

EAL 4+: 150K€ → 300 K€

"Objective" IT Products Certifications cost a considerable amount of MONEY, Takes TIME and is more often VALID for only a short time

EAL Level	Evaluation Times
EAL 2	4 – 6 months
EAL 3	6 – 9 months
EAL 4	7 – 12 months
>EAL 4	12 – 24 months

# SO WHY NOT REUSE EXISTING EVALUATION TECHNIQUES FOR IoT?

AMMAN, JORDAN | 15-17 OCTOBER 2019

### **IoT Product Security**

## Why Not Reusing Existing Certification Techniques?

#### Cost, time, validity

•Can't be applied to the 50 Billion IoT product market! Not enough resources to do that...

#### Subjective

•What is the credibility of the evaluation lab/pentester/etc. ?What does secure mean? Can we compare more or less secure products?

#### Scope

•Silo Approach - they often cover part of the problem, specific to an industry (banking, ID) but security & privacy is now a concern of every business and citizen.

#### Poor Security Definition

•There is no common and holistic approach to define security requirements per profile taking into account the threat model & risks due to the intended usage

AMMAN, JORDAN | 15-17 OCTOBER 2019

### **Smart Integration into the Life-Cycle**

AMMAN, JORDAN | 15-17 OCTOBER 2019

## **KEY TAKEAWAYS**

TOWARDS A RESILIENT AVIATION CYBERSPACE

AMMAN, JORDAN | 15-17 OCTOBER 2019

### **Key Takeaways**

AUTOMATISATION & AGILE METHODOLOGY

RECOGNIZE EXISTING EVALUATION METHODOLOGY

REDUCE COSTS

COMPARE IOT DEVICES

REQUIREMENTS TAILORED TO THE INTENDED USE

Allow to automate Security Reqs/Questionnaire acts as guidelines, not much overhead evidence docs, and reduced testing time 02

Requirements could be simply mapped to other certification schemes allowing recognition of existing methodologies by composition such as SOGIS CC evaluations for underlying platforms. In any case all types and formats of evidence could be reused as is under this Scheme.

03

The evaluation must address priorities and is time-constrained, thus limiting its delays and cost, but still offering a guarantee that experts have spent time analyzing the product most valuable security functionalities

04

The accurate
evaluation scope
coupled with the
security functionalities
and the defined set of
security requirements
are a result of
accurate security
analysis/threat
modelling, The
Evaluation metrics and
ratings are simple and
expressive

05

The scope of evaluation focuses on the HW & SW forming the IoT Device but the threat model covers the operational environment including the final application, interfaces and other components connected to the product if any.

TOWARDS A RESILIENT AVIATION CYBERSPACE

AMMAN, JORDAN | 15-17 OCTOBER 2019

## **Key Takeaways**

COST-EFFICENT CERTIFICATION MAINTENANCE

V

CREATE INCENTIVE FOR VENDORS

INVOLVE IOT SERVICE PROVIDERS

SIMPLE METRICS

REGULATIONS COMPLIANT

Provide a smart framework to define, attest and maintain the certificates delivered for IoT devices after issuance. Patching & Temporary Mitigation are allowed. 07

Minimum Effort required on providing evidence, simple metrics, clear requirements, security valued by customer 08

Expressing security L Level Rating + Community creating awareness. IoT Service Providers and Customers trust the vendors 09

Requirements and Test Procedures must be expressed in simple wording allowing the vendors and CABs to implement and test efficiently. 10

Incorporate
Cybersecurity, Safety
and Resilience in
Regulations (by
design).
