I have an input field with a list of objects inside it. I'm trying to select an object from the list of objects to populate the input field with. How can I do this in vue? I think the real question is how can I get the model in the v-model with an object instead of a string? If you need any more info, please ask A: Vue will set v-model to its value, so if you type 1 into the input it will set value to 1. If you want to show the model in a "select" box, you should create an array in your data, then create a method to manipulate that array. var data = { items: [{id: 1}, {id: 2}, {id: 3}] } Then your method would be something like this: var app = new Vue({ 520fdb1ae7
