TV Repair Michigan Business Hours 7 Days a Week from 8 a.m. to 8 p.m. Payment Methods Return to TV REPAIR MICHIGAN Home Service Of the following Michigan cities in the Detroit metro area: Sterling Heights, Macomb Township, Utica, Shelby Township, Clinton Township, Troy, Warren, Madison Heights, Rochester Hills, Rochester, Rochester, Chesterfield Township, Auburn Hills, Bloomfield Township, Oakland Township. Next to me, in my district, Michigan, Detroit my client sent me this BG LED TV with a complaint have a sound but not a picture. These kinds of problems caused by one of the bad LED lights in the LED bar. With just one bad LED, the TV will be closed, thus not visible the image. As soon as the lid was open, I could see three circuit boards i.e.; The power board, the main board and the T-Con board see the photo below: I then performed a DC voltage check on the LED back plug and found that the DC voltage had come for a while and shut down. This usually indicates LED lights have a problem. But I have to open the kit in order to prove that I'm right in saying that one of the LED lights can have a problem. When removing LED TVs, be especially careful when sticking together the tab. If you break it, then the panel may feel useless if you know a way to fix it. Once all LEDs are exposed, you can check each of the LEDs with your meter by installing the meter in diode mode. A good LED should light up, and the bad one doesn't light up. See three photos below. True, I found a bad LED. This is the main reason for the closure of the TV. Since I have an LED bar and don't have a single LED, so I've replaced the entire LED bar and can keep the remaining good LEDs for use in the future. It was a fantastic look when you see that all the LEDs were perfectly lit. Once you have confirmed the LEDs are all working normally and no longer turning off, you can put back all the pieces. Connect back the LVDS cables gently to the T-Con board as shown below: BG led TV have finally been refurbished and I was very happy as I could earn some money from this work. If you really want to venture into an LCD or LED TV you can check on the Kent and Damon books. Once you have received your books, you can seek technical support from them to make you a good LCD/LED TV malfunction. All the best for you.
