## *Maintain confidence in your control system's reliability*

"Am I properly maintaining my control systems?"

Control systems play a critical role in the day-to-day operation of complex facilities and remote assets. System managers and operators alike want to know their system is operating as designed and secure from external cybersecurity threats. They want simple assurance the system will be dependable well into the future. Yet, knowing whether the hardware and software that underpins a control system is ready for the road ahead is anything but simple.

Introducing the Automation & Cybersecurity Service Plan

We understand the challenge. Decades of experience working closely with customers has taught us how to keep control systems working properly throughout their expected lifespan. Our Automation Service Plan starts with thorough *inspection* of controls equipment. Second, we *test* the hardware and software that enable controls to function 24/7/365. We then complete *maintenance* on the central components of the system. Our regular, comprehensive approach ensures you can rely on your system for critical operations.

We have you covered

The Automation & Cybersecurity Service Plan is tailored to your system needs.

- ✓ Extends warranty protection and defends against cybersecurity threats
- ✓ Covers major facilities, remote sites, networking/telemetry, and computers
- ✓ Predictable expenses on a consistent schedule with peace of mind
