7-day battery. The functionality of the program differs from other alarm clocks in that the date and time are saved automatically every day in a specified folder of your computer. Comfort Software Hot Alarm Clock is in the direct lineage of the Hot Alarm Clock 2005, and with the 3.1 version, is specially designed to have an alarm clock with an automatic mode for those who like to sleep without having the alarm clock ring. The program features a user friendly interface and includes an automatic wakeup, hot key, silence, volume and screen saver mode, and a d-diy mode. The program is equipped with a clear layout of settings and alarm timers, and provides the possibility of making an alarm for different days and hours of the week. The program also supports an automatic month of the year. You can add dates, months and other alphabetic, numeric or date settings, according to the program preferences. The program allows the user to set the amount of time left until the alarm will be activated. You can also have an alarm in the morning, evening or night. You can have a sound that repeats itself, stop or pause the alarm clock. The program also allows you to have sound files or videos that will be played in the event of alarm. One of the most important characteristics is the option of customization of the program, where you can download skins, wallpapers, alarm sounds and more. Also it provides an information window that will let you know the program's current state. The built in tasks manager allows you to add your own tasks, set a timer for an automatic task, and set a reminder for the task. The program can also send itself as a task reminder, that is, the program will be activated in the event of an alarm, but with a reminder to perform the task that was added with the same program. The program also provides the functionality of recording your daily time, and measuring the time from when you wake up until you go to bed. You can use your webcam to make an appearance in the program, and you can record a video with a music background and place it in a folder of your computer. The program is also equipped with a diary that lets you record the time for each day, and the progress for each day. You can store information about your personal events in the diary, including birthday and anniversary, and add reminders for important events, such as when to pay an electric bill or a mortgage, as well as reminders to buy a car or open a bank account. In short, Hot AI 520fdb1ae7
