The song, inspired by Bob Dylan's answer, was about the 1991 Rolling Stone question of whether he was happy. These are yuppy words: 'Joy' and 'sorrow', he replied. It is not happiness or sorrow; It is either blessed or without anyone. A video was filmed for the song in anticipation of nothing to sound before being released as solo. However, the star was chosen to lead the album instead and it was never formally released. The clip was later included on DVD Switchfootage 2. Finger patterns in this text can be found in countless songs, so they deserve to be practiced. With each fingerpicging pattern, I'll show you how to play it on three different strings, give you tips on how to play it, and how to come up with different variations on the pattern. I recommend practicing each pattern with other chord progresses to get used to applying patterns to different wires. You can use these pattern play on an acoustic or electric guitar using any open strings or barre wires. Once you get used to these fingertip patterns, check these easy fingertip songs to start applying them in well-known guitar songs Guitar strings are used in fingerpicging patterns, while you can use these fingers pattern with any strings. For each example used the same three strings: Am, Em, D. Here are three strings used in this text: Note: If you do not know how to read the above chord diagram, check out this ultimate guide to read the guitar melody diagram. The guide explains how to read chord diagrams with helpful diagrams, tips, and learn a printable PDF with easy strings. The reason I chose those three strings is so you can see each fingertip pattern applied to a melody that uses six strings (Em), five strings (Am), and four strings (D). Seeing how many wires the pattern changes depending on uses a wire will make it easier for you to apply these patterns to other wires. Note: All of these patterns are given in the Standard Notation and Guitar tab. If you don't know how to read the Guitar tab, find out how to read guitar TAB in this useful guide. If you want to learn to read standard notation, learn to read the standard notation in this thorough guide. Fingerpicging Pattern 1 This fingerpicging pattern is more visible in many different genres of music and songs. Once you learn the basic idea behind this pattern, you'll start to notice it in music. As with the pattern of several fingers, the first note plays the root note with your thumb. The second notes stick to the first three strings. This means you can choose whether to use your middle (m), ring (a), and pinky (c), or you can use your index (i), middle (m), and ring (a). I recommend using your index finger (i) on the G string, use the middle finger (M) on the B string and the ring finger (a) on the high E string. If you want to anchor your hand in place for additional support then you can use your pinky to relax on the body of the guitar. The great thing about this fingerpicging pattern is that the thumb is the finger that needs to be changed. The other three fingers always remain on the same wire. It is easy to learn such fingerpicging patterns because your fingers will always be on the same wire. If this is the first naplic pattern you are learning, take your time and make sure each note rings clearly. Fingerpicging Pattern 2 This pattern will give you a lot of practice of moving your thumb into different wires. It also gives you a glimpse of a style of finger that is common in the classical styles of Spanish, Flamenco and music. With this pattern, you can decide whether to stick to the classical style of fingerpicging (using three fingers and your thumb) or you can take a different approach. Use your thumb for at least five strings for an option and use your forefinger on the high E string. This means that you will turn between thumb and index for every note. I recommend learning this pattern using your thumb and index, so try to learn it with a classical fingerpicking technique if you're in for a challenge. You may be surprised by how fast you can play this Pattern after a bit of practice. If you like this style of play, check out the traditional piece Malaguen. Fingerpicging Pattern 3 This fingerpicging pattern is very common because guitarists prefer to group notes in three. The problem is that when playing the eighth note, you end up with an extra note. So guitarists tend to cut the final group of three into a group of two. Take a look at the tabs below and see if you can find groups of three and groups of two at each time: if you're unsure what I mean by groups of three and a group of two, the first three notes are groups of three played with thumb, index, middle. Then there's another group of three played again with thumb, index, middle. Then the bar ends with two groups played with thumb and middle finger. The rhythm is the same for all of the notes, but you can hear how the pattern is broken into two groups of a group of three and two notes. I recommend spending time practicing this fingerpicging pattern as it shows so often. Even outside the fingers you'll see this pattern of two groups of three and a group of two. When playing in 4/4 time, you can almost expect to hear it. Fingerpicking Pattern 4 As I mentioned in previous fingerpicging patterns, guitarists love the notes group in three. Something interesting happens when we change the rhythm to three and play in 3/4 time - we can play endless groups of three without needing to cut any notes at the end of a bar! Here's an example of endless groups of three played at 3/4 time: Don't worry if you haven't played 3/4 before in time. Just play it the same as other exercises with a consistent rhythm. Think of playing three in 3/4 as a technical way of saying we are playing nine notes at once instead of eight. Over time you will start to understand how to think about time signatures other than 4/4. One way you can create variations for this pattern is to play the first and second strings instead of the second and third strings for the first two wires. By moving your fingers up to a string, it gives your thumb the freedom to move the bass note around. Try it out and think about which version you like. Fingerpicging Pattern 5 This fingerpicking pattern introduces two notes playing at the same time. First of all, it may feel a bit complicated, but once you get used to it you'll find that it completely opens your fingers to new options. Being able to play multiple notes at the same time is a huge advantage of fingers. Once you've mastered this skill, you'll be able to play things that will be impossible to play with the pickup (unless you use hybrid picking). The important thing to remember is that the top two strings should not be strumming. They need to be tied with two fingers at the same time. If you strum these stars, it won't sound perfect. I advise using my middle Ring fingers on the top two strings with your thumb for your forefinger and bass notes on the G-string. Practice breaking both two wires together with those two fingers until it feels natural. Once you feel comfortable with this fingerpicging pattern, you will find it very easy to learn similar patterns that bind multiple strings at the same time. Try to create a variation for this pattern that breaks the second and third strings together instead of the top two wires. Use your forefinger and your middle finger to play those two wires and use them to play at the same time. Fingerpicging Pattern 6 This fingerpicging pattern plays two notes at the same time, but it feels very different than the previous pattern. This time two notes are not on the impending wire. I recommend learning this pattern with my middle finger on the first string and my forefinger on the second string. Play the rest of the wire with your thumb. With this approach, you'll break your thumb and middle finger together, after your index finger is playing the second string. This fingerpicging pattern may seem complicated at first, but once you practice it a couple of times you'll see it's quite simple. Once you get used to breaking your thumb and middle finger together at the same time, the rest of the pattern becomes an air. Once you learn this pattern, try playing it with classical fingerpicging technique using index on your ring finger, middle finger on B string and G string on first string. Depending on your game style, you may find that it makes the pattern easier or harder to play. Fingerpicking Pattern 7 This fingerpicging pattern pattern is similar to 5 patterns in which you have to tie two adjacent wires at the same time. The main difference is that this pattern is in 3/4 time. This gives you a good example of how you can change a pattern to fit different time signatures or rhythms. Practice this pattern in the same way that you will practice pattern 5. If you want to try something different then experiment with moving the bass note around. For alternative way to play this pattern, play first and second strings with your index and medium fingers and use your thumb for all other notes. Playing this pattern using those fingers will give you a different way of looking at patterns. Fingerpicging Pattern 8 This fingerpicging pattern is in 6/8 time, but it is not as complex as it seems. What makes 6/8 time different is the way it fits well with two groups of three notes or a group of six as shown below: It's the simple pattern which inspired James Hetfield to write nothing else in matters (Metallica). He was talking on the open wire break phone and happened to play the second time in the pattern above. If you listen to the beginning of nothing else matters, you will hear the pattern played An open M raag. The song is a great example of how you can start with a simple finger pattern and use it as an inspiration for something more complicated. Take a look at the first minute of a few more cases on how you can take any of the above fingerpicging patterns and turn them into full songs. What you come up with is to be as complicated as what you hear in nothing cases. Start with simple patterns like the above examples and experiment with turning them around. Once you get used to the above fingerpicging pattern, check out these easy finger songs to try out some more challenging patterns and strings. The songs in that lesson are very simple, but are more interesting to play than some of these patterns.
