Pruning Made Easy: How and When to Prune Absolutely All Topiary and Bonsai Section, written by Carol Bucknell (en) NH Gardener Special Edition, April 2016 Ancient Art Topiary and Bonsai take a bit of time and skill to master, but the end result gives a certain garden wow factor. For impatient topiarists who want to create a wedding cake, buying a triple pom-pom topiary will give you a start of 5 years or more, offers Rachael. Then just smooth the balls, taking the curve off by leveling the top and bottom of each ball - A: I'd like to try my hand at the topiary. Where to start? It is best to start your first topiary with simple shapes such as a cone or ball. The choice of plants is key: the ideal species for topiary are those with dense growth and tiny leaves. Experts recommend one of the many Box varieties for beginners as it is one of the most forgiving evergreen shrubs, being long-lived and hard to kill. You can, however, try corokia or pittosporum if you prefer native shrubs. When choosing the right plant, make sure it is healthy, has a balanced branch structure and fits the shape you want. If you're after a standard or lollipop shape, for example, you'll need a strong central trunk; while for the cone you will need a sample that has a vertical habit of growth. Topiary expert Rachael Matthews of HEDGE Garden Design and Kindergarten in Wellington suggests using your pot's cap as a cutting guide - a round ball pot and a square pot for the base of the pyramid. Having the right tools is also important: long processed scissors for the first rough shape, as well as short topiary scissors for fine finishing work. Your mantra should be: the more you trim, the denser the plant will grow. The reverse occurs if you leave it too long between incisions - the plants come out of shape, causing gaps in the foliage. It's best to trim a little and often, says Rachael. Thus, all growth is going in the right direction and not cut off a large amount of unwanted growth once a year, which is a waste. By creating Topiary Shapes Once you have learned to develop simpler topiary shapes, let your creativity soar with whimsical flights of fancy. Wedding cake 1. Use the same method as a triple pom-pom, says Rachel Matthews. Choose a plant that you would use for a standard topiary, one with a vertical shape. Remember, the more leaves you have, the more you need to make a topiary, otherwise you won't get a clear definition. Allow your plants to grow one tall leader to full height and then cut the leader to force lateral growth. These lateral branches will form your levels. Develop ready-made and tiers. If you're not happy pruning on your eye to gauge whether your proportions are right, draw a topiary to scale and develop the thickness of each level and gap. Then use the anti-stem roulette to find out which sections of the sections to clear. 4. You can also mark the trunk sizes with a permanent marker on the bamboo cane and attach it to the stem. This means that you will always have your handyover sizes for years and cane will help keep the leader straight until it solidifies off. 5. Cut back the foliage to create gaps between the tiers. Rachael recommends a 5-10cm gap or negative space on the stem between layers. 6. Work slowly and make sure you have the right perspective - step back to gauge your progress often. 7. Make the bottom layer a little thicker and wider than the layer above to create a stepped tiered structure. It looks better and also allows light to lower layers, which contributes to better growth. 8. The layers will be short and rare to begin with, but will gradually spread horizontally and eventually grow into a flat disk shape. Don't prune anything and everything in the winter, which some still consider a basic pruning pruning Many spring-flowering deciduous shrubs set flower buds for a new growth of the previous season, so if you prune in winter, you literally cut off the potential blooms of the upcoming flowering season. Common pruning tips Prune back any bulky or untidy growth tips with a pair of sharp secateurs to maintain neat growth habits. Cut off the fast-growing flowering shrubs immediately after flowering with a pair of short winding scissors. Often they are best to be almost up to ground level. Prunes hedges and topiary with a pair of sharp hedging scissors. Topiarists should be trimmed lightly throughout the year to maintain their beautiful shapes, and the same goes for hedges too. The smaller the volume is removed in a single pruning, the healthier it is for plants. All hedges should be formed so that the bottom is slightly wider than the top of the hedge as it allows the sun to reach the bottom, thus avoiding the bare or dead spots at the base. Regularly remove any suckers or unwanted bottom branches on standard roses and trees at ground level with a curved saw clip. Often large, overgrown or stressed shrubs benefit from heavy pruning that takes them up to knee level. This seems to give such a plant a new life. Do not be afraid to carry out this procedure - most shrubs quickly recover, developing into a lush plant. Pruning ornamental trees Dead or unwanted branches should be removed from the trunk of the tree with sharp pruning of the saw. The recommended method is to make the first incision on the underside of the branch, about 10 cm from the main stem, cutting about halfway through the branch. Start the second incision on the top side of the branch, a few millimeters further from the main stem than the first incision. Seen until the branch falls; it leaves behind a short stump. Cut off this stump close to the main stem using a quick sawing motion. This method of triple incision will provide hygienic and neat pruning of the wound. Trimming conifers winter is the right time to give conifers easy pruning with a spiky pair of hedge scissors. This stimulates the new growth of fresh spring and supports the neat, symmetrical shape of the plant. It also helps in keeping conifers at more manageable sizes. Pruning evergreen shrubs should be trimmed and maintained on a regular basis, and winter is often the most appropriate opportunity to accomplish these tasks simply because there is free time. CHRISTMAS PRICES ARE NOW LIVE! SAVE UP TO 30% OFF rrp About Us Stall 2002, the only operator. She is married and has five adult children. A qualified accountant taking the opportunity to do external work that gives more satisfaction. I like being creative and make gardens more eye-catching. What we do Very experienced in all aspects of gardening, including soft landscaping. I like to deal with my on a personal basis so they get individual attention. I am very proud of my work and consider myself a mature, trustworthy and respectful person. Currently I am limited in my work due to ill health, but can give limited service through a partner.
