Iso guide 73

The ISO 73:2009 guide defines common terms related to risk management. It aims to encourage mutual and consistent understanding and a consistent approach to the description of risk management activities and to use a single risk management terminology in processes and risk management frameworks. ISO 73:2009 guide is intended for use: those involved in risk management, those involved in ISO and IEC activities, as well as developers of national or industry standards, guidelines, procedures and codes of practice regarding risk management. Here are some of the terms discussed in guide ISO 73: BUY ISO Guide 73 - Risk Management Dictionary Intended Use/Purpose - Intended use/purpose of using a product, process or service according to the specifications, instructions and information provided by the manufacturer. Harm - Physical harm or harm to human health, or damage to property or the environment. Danger - Potential source of harm. Risk - A combination of the likelihood of harm and severity of harm. Residual risk - Risk left after taking protective measures. Risk Analysis - Systematic use of available information to identify hazards and assess risk. Risk Assessment - A risk-analysis decision on whether the risk was acceptable was achieved in this context, based on the current values of society. Risk Assessment - General risk analysis and risk assessment process. Risk control is the process by which decisions are made and implemented to reduce risks or maintain risks within certain levels. Risk management is the systematic application of management policies, procedures and practices to risk analysis, assessment and control tasks. For principles and guidelines on risk management, the reference is made to ISO 31000:2009. Buy ISO 30001 for Principles and Guidelines for Risk Management Customer Service No. 41 22 749 08 88 Hours: Monday to Friday - 09:00-12:00, 14:00-17:00 (UTC-1) This guide contains definitions of common terms associated with risk management.
