Clickfree automatic backup 250gb

Top positive reviewsAll positive reviews> JPE's MA5.0 with 5 older computer backups in the worldReviewed in the United States on July 11, 2009This fifty dollar device will make your fears go away - at least if you lose sleep about losing your most important computer files. Apparently, Clickfree has been selling backup drives with this built-in software for some time now, but I believe these transformers are a fairly new product. One of the things that I liked the most is that they work with existing backup disks(s). Additionally, you can use a single transformer with several different computers and backup disks. I use it on home computers and corporate computers - all with different backup drives. I have been using this device for about 3 months and it is not only very easy to set up, it works exactly as promised. (IMPORTANT NOTE: I don't believe these currently work on Macs.) It will automatically back up documents, music, photos and much more. If you want to configure the backup process and backup locations, setup takes less than 5 minutes (or you can simply go with automatic function, and the drive will search for and create a backup of about 400 different file formats and extensions without input). The only thing I noticed was that my AOL email files were not named with the extension and therefore no backups were created until I replaced the AOL Organize folder as an additional specific backup target. If it sounds complicated, don't worry, it's not. The first time I ran a backup I just let the device work on auto-remote control and back up almost everything I wanted. Later, when I had more time, I went to the configuration (very easy) and said to include all the contents of several folders (including the AOL file I mentioned earlier). One of the great things about this device is that it remembers the settings for each computer, so any additional backup goals that have been added are remembered without further input from you. Just plug it in and it works - literally! And you can add new destination folders at any time with just a few clicks. What's more, subsequent backups take only a few minutes because your device only copies files that have changed since the last backup. It's a huge time-out. With this layout, you won't hesitate to back up your pc every day or every week. There are very few products I have ever bought that I can wholeheartedly recommend (practically) to anyone. This is one of those products. If you have a computer (not a Mac), do yourself a big favor and \$50 and get one of these devices - you'll sleep better knowing that your files are safely archived! The humorous slogan on the Clickfree packaging reads: easier than making a toast. I don't think they overreacted. Remember that you must already have a backup drive if you are buying this particular transformer product. Or you buy all-in-one Clickfree backup disks that already have this software built in, but then when/if the disk dies or the file size exceeds the disk size, you will need to buy a new drive or buy one of these transformers. Therefore, obtaining this transformer is probably a better way for longevity and flexibility. The 250GB Automatic Backup External USB Hard Drive from ClickFree is a bus-powered USB hard drive designed for use in data backup. The drive offers a user-friendly backup solution because no software is required to install or configure it. Simply connect the drive to Windows or Mac to automatically back up your system. Automatic support, there is nothing to configure or installBacks up more than 400 types of files, including photos, music, videos, Office documents, financial data files, email, and favorite websitesWork with multiple computersThe use of disk backup is compatible with Windows 2000, XP, Vista, 7 and Mac OS X 10.5 Leopardclickfree 225-1003-100 SpecsPerformanceCapacity250GBInterfaceUSB 2.0Drive Speed5400rpmBuffer8MB Average Seek TimeNot Specified by ManufacturerSustained Data Transfer RateNot Specified by ManufacturerDriversSupportedWindows 2000 SP4, Vista, 7IncludedYesSystem RequirementsMacMac OS X 10.5WindowsWindows 2000 SP4, XP, VistaHardwareUSB portGeneralMountingPortablePowerable RequirementsSus-poweredEnvironmentalRequirementsNot Specified by ManufacturerDimensions (WxHxD)4.5 x 0.7 x 3 (11.5 x 1.7 x 7.6cm)Weight 0.18 kg (0.18 kg) General Storage Equipment Corporation Storage Controller Various included accessories hard drive Power Interface Provided extension & connectivity Hard drive Creates more than 400 file types - Clickfree Form Factor (Short) (metric) Performance System Requirements Apple MacOS X 10.5 or later - Microsoft Windows Vista / 2000 / XP Header External Hard Drive Data Transfer Rate Details & Weight Cable Details Manufacturer Storage Appliance Corporation 12 items found from international sellers eBay Clickfree Automatic BackupBlack Friday Sale ends inClickfree Automatic Backup ... Check out more Black Friday Sale deals from these top sellers: Clickfree's Automatic Backup 250GB is an easy way to back up your digital data files, though it won't clone your entire hard drive or backup app. This plug-and-play device, which offers a pocket-sized shape, works on any Leopard Mac without the need to install software. When first connected, the built-in disk software scans and confiscates more than 400 types of data files, including photos, e-mail messages, text documents, videos, and more. Subsequent inventories are incremental. You can decline to back up some files by unchecking categories, such as photos or music. Unfortunately, you can't narrow down backups in these categories, such as backups. jpeg, but not TIFF. Multiple computer and/or user accounts can be backed up to the same drive, with files stored separately for each user. However, they are not protected in any way. Anyone who uses a backup disk has unrestricted access to each file on it, regardless of permissions. Keep this in mind if you want to keep your files private. A very welcome feature is the option to back up external hard drives or flash drives, as well as the main hard drive. If you only need a backup of one Mac, you can better invest in a high-capacity external hard drive and use it with Time Machine. But if you're looking for a simple way to back up your digital data, Clickfree Automatic Backup 250GB is worth the whirlwind. Follow TechRadar Reviews on Twitter
