Matt Berkowitz Updated September 18, 2017 In order to fix the paper chopper, disable the device, let the engine cool down and try to turn it on again to see if there are any changes. Learn how to run a paper chopper backwards to clean it with the help of an IT specialist in this free video by fixing paper shredders. Reader Tim writes with this tip to create a simple file chopper constantly and safely delete files from the hard drive: I add instant shredder files to my Windows desktop using the SDelete utility, freely available from Sysinternals. Save the SDelete.exe catalog in C: WINDOWS-system32. Add the following text to the new text document: @echo from echo. Echo. File (s)/Folders (s) will be deleted forever! Echo. Echo. Click CTRL-C to interrupt and stop the package or... Echo. Pause sdelete -p 4 -s%1 pauseSave file as shred.bat on your desktop next to your recycling bin. Now just drag and drop these sensitive files on the icon to make them disappear forever! I gave Tim's batch script a try and it seems to be working perfectly. I like the idea of keeping your permanent file shredder right next to The Recycle Bin, giving you the choice to send files to restore Recycle Bin or shredding them to hell so they can never be restored. To make things easier on you, I've put together shred.bat, as described above for download, Windows only. Shred.bat is not the best solution if you want to permanently remove data from the entire drive, but it's great for any regular deletion of the old file. If you have your own method for simple but secure file deletion, share it with the rest of us in the comments. Formatting a hard drive before you sell it on ebay is not enough to constantly erase the data... Shredders do the job much faster than scissors, but which brands work best? Engineers at the Good Housekeeping Research Institute rated four units to see which could turn paper stuffed envelopes and credit cards into tiny fragments and chew through staples and paper clips. They also checked to make sure that small fingers could not fit in the mouth of the machines. Here are the winners, including web exclusive information. Powershred Fellowes Powershred DS1 (\$99.99; 800-955-0959; www.fellowes.com) was faster than any other shredder tested by the Institute for Good Research economy, feeding through the page in less than three seconds. The paper box was fairly and easily emptied (it is made of metal mesh, so you can see when full and needs to change). In addition, testers liked the sleek and modern look. MultiShred Need a space saver? HSM MultiShred One-4-All (\$79.95; 800-613-2110; www.hsmofamerica.com) is the smallest and lightest and most portable of the tested models. However, it's mighty (this shredder can even cut through the compact files). In addition, it was the safest of the units, cutting materials into the smallest sized bits (less than 1/4 inch). What we like is cross-shredding for the effective and safe destruction of anti-jam auto-back documents to clear paper plugs auto-on sensor What we don't like is noisy, despite its bucket size not so durable is heated quickly when it comes to shredding documents, you need a capable, reliable and sturdy machine to do the job. AmazonBasics is exactly that. The ability to grind up to 12 sheets and credit cards, you will have unwanted documents and cards destroyed for some time. It can even grind continuously for 7 minutes with only 30 minutes of cooling. It even features an anti-jam auto-back to clean the paper jam quickly and easily so you get back to chopping at the right time. And, with cross shreds, you'll find your documents or unwanted cards effectively and reliably destroyed. Small and discrete, you can place this shredder anywhere in your home without being on the road and can still expect to hold it up to 4.8 gallons worth of shredded paperwork. It's also easy to set up and even easier to use. AmazonBasics also comes with a 1-year limited warranty if you run into any issues. What we like is that we don't like the short running time and long-term cooling when getting equipment for your home office, it's important to find things that not only work well, but don't take up too much space. Swingline Prostyle is here for your home office shredding needs all the time fitting where you need it. Small and compact, it's still ready to take on all your shreds of jobs with its impressive 14-leaf power. In addition, it can destroy CDs, DVDs and credit cards in addition to documents and comes with a separate slot for CDs and DVDs, so you don't run the risk of wearing down the main blades. You don't even have to worry about noting the staples or Sharp and sturdy teeth can cut through without worrying about wear out. It can even shred junk mail without having to remove the envelope. The Swingline can also run continuously for 4 minutes, but will require 40-minute cooling between continuous runs. With its sleek and compact compact It's almost hard to believe it can enter up to 5 gallons worth of shredded material. And with its supercross shred, your documents will be effectively and reliably destroyed with ease. What we like about the easy cross-cut shredder that we don't like for quick, easy and limited shredding sessions, Amazon's six-sheet transverse paper and credit card shredder more than fits the bill. Capable of shredding strips in 7/32 inches or 1-27/32 inches, the compact shredder is ideal for a home office. At 15 x 12.1 x 7.7 inches and 8.25 pounds, the shredder is not going to knock your socks off with raw energy. The 3.8-gallon size bin is just right on the shredder, which has two minutes of drive time. 30-minute cooling corresponds to more expensive shredders, but a low price tag is a compromise for a shredder that lasts only 120 seconds before automatically disconnecting. Running time aside, shredding ATM receipts, old tax returns and junk mail make this device perfect for use in small business or home office. In automatic mode, the shredding begins as soon as the sensor detects that a sheet of paper or a single credit card has entered an 8.7-inch wide paper channel. Like a cross shredder, each individual shred will occur faster than a micro-cut shredder, but it sacrifices six times less confetti as a shred. What we like is that we don't like the main reason for chopping paper comes down to security. And Fellowes Powershred 99Ms is a shredder that puts security above all other features. A micro-cut shredder can push 12 sheets (and credit cards) into a 9-inch wide feed slot per pass in a 5/65-inch x 9/16-inch cross-sectional particle that stamps it as the safest shredder on this list. As a micro-cut shredder, the 99Ms provides ultimate protection, with particles 10 times smaller than the standard transverse incision. Realistically, 99Ms will cut a one-letter-sized sheet of paper by 2,154 particles per sheet, so it's almost impossible to assemble. At 25.2 x 17.4 x 11.2 and 41.5-pounds, 99Ms are a bit on the high side, making it much more suitable for the business environment. Regardless of its placement, 99Ms can run for 15 minutes before the 25-minute cooling period is needed, allowing time to properly dispose of the nine-gallon retractable bin. Fellowes claims that the bin can hold 80 percent more micro-cut particles per gallon than standard transverse particles, including their own models. And the inclusion of SilentShred limits the decibel level for ultra-quiet performance in shared workspaces. What we like is what we don't like with the 40-minute drive time. Royal's 1840MX 18-a-list commercial cross-cut paper chopper is an outstanding option for and small businesses. Its long time time helps it destroy 18 sheets in one pass in 5/32-inch x 1 1/8-inch particles, as well as CDs, DVDs and credit cards. Cards. Shredded, confidential information documents fall right into the slip of an 8.5-gallon basket with a clear viewing window to show you when it needs emptying. With the automatic start/stop function and reverse, the 1840MX will grind one sheet in just under five seconds. It's 11.5 x 15.2 x 25.50 and weighs 44 pounds, but doesn't come casters for easy maneuvering around the house or office. What we like about Low Noise High Waste Capacity is that we didn't want Fellowes to strike again with Powershred 125Ci. Starring in 14-gallon bin building, the energy efficient 125Ci is ideal for use in larger offices. This power plant is capable of shredding 20 sheets of paper per pass in 397 (5/32 x 1-1/2 P-4 safety level) transverse particles, and it can even handle various items such as staples, paper clips, credit cards, compact files and more. It can puff away for 45 minutes before cooling down and its 100 percent jam-proof system promises to keep frustrations to a minimum. Additional features that we particularly like are SafeSense technology, which freezes the shredder when it feels like the hands are touching the opening of the paper, and SilentShred, which keeps the noise to a minimum - although that doesn't cover your chatty employee. What we like about the high speed of shredding a 9-gallon power energy management system That we don't like may be excessive for some users At first glance, an expensive shredder may seem unnecessary, but for large businesses, HSM's 150-a-list shredder is a fantastic choice, with features to spare. The three-year warranty is paired with high-quality materials designed to ensure safety and durability throughout the 14th year of the shredder. In addition, the energy control system pumps only 0.1 W on standby. At 29.1 x 15 x 15.5 and 42.6 pounds, it's not unusually large in price. Most importantly, the size belies features, particularly the 150-leaf automatic tray, which can handle up to 12.8 feet of grinding per minute. The nine-gallon bin is paired with a wider throat opening (9.5 inches) and there is an automatic start and stop to prevent paper jam. Micro-cut shreds at a very high level of security, which is ideal for destroying sensitive data to prevent identity theft or documents important to a person, company or institution. Finally, the ability to continuously add paper manually while processing autoseed stacks reduces the time it takes to use HSM. What we like about the equal capacity of the 6-gallon shredder is what we don't like when it comes to shredding, models can range from budget records to out-of-this-world splurges, but they all emphasize the processing of both multimedia and paper. While many Focused on first and multimedia second paper, Fellowes Powershred 79Ci treats each shredded object equally. It can handle 16 sheets of paper per pass, along with staples, credit cards, paper paper and CDs/DVDs. The 100 per cent Jam Proof system eliminates paper plugs and credentials with hard jobs, particularly multimedia. And the introduction of SafeSense technology goes even further to close the shredder when the hands are too close to opening the paper. Like a cross shredder, 79Ci will reduce 16 sheets of paper per pass to 397 particles (5/32 x 1-1/2-inch), which will drop into a six-gallon retractable with an LED bin-full indicator. Capacity Sheet - If you use a paper shredder for casual home use - bank statements, these endless credit card offers - then a small capacity of six sheets should be excellent. But if you use it for a home office or business, then you can pay a little more to be able to shred more at once. Shred style - All shredders don't shred, so. Some destroy documents more completely than others. If you're using a shredder for pretty routine documents at home, then you probably don't need top-line shredding capabilities. But if you're dealing with sensitive information at home or in the workplace, then paying more for micro-cut shreds rather than cross-chopping, that's a good idea. Other Materials - There may be times you want to shred more than just paper. Credit cards, compact cards with sensitive material on them, paper with staples - the list can be further. That's why you should check and see if the shredder you're interested in can handle these types of grinding. Staples are especially key because who wants to delete them before sending documents through a shredder? Shredder?
