Standard galactic alphabet encoder

From KeenWikiThe Standard Galactic Alphabet (SGA) is a writing system used throughout the Commander Keen series. It is a simple replacement cipher where each letter in the Latin alphabet has been replaced by a different symbol. SGA can be used to record in different languages; however, in games, SGA is used to write messages only in English. Tom Hall's reference translation structure In addition to 26 letters, the SGA uses gaps for its interorose separation and in some cases. symbol as a full stop. In the Keen 1 level, where most players receive a pogo-stick, a short horizontal dash over the long appears on either side of the pogo word, possibly as quotes (although not listed in any of the official translations). There are no other known punctuation marks. There is also no capitalization, and the figures are also missing. For this reason, the numbers are usually spelled out in words. The SGA story was created by Tom Hall. Originally for Keen 1 he drew some graphics for exit signs that he made look a bit more alien by changing conventional Latin letters a bit. He then added other signs saying hello and it's neat (near Rayguns) and he ended up creating transitions for other letters of the Latin alphabet in order to make the signs resemble writing in an alien language. Official translations of the official SGA translation found in Keen 3 Official Translation SGA found in The Keen 6 SGA can be found by looking at many signs throughout the game. While Keen 1 has only 15 letters displayed anywhere (A, B, C, D, E, H, I, K, L, N, O, S, T, X and Y), later games have more. Kin 3 is particularly useful as it has a relatively large number of characters with both SGA and Latin letters. In Keen 3, a sign with a full SGA can be found in a secret level, similar to the Rosetta Stone. Another sign of the alphabet can be found in Keen 6 in the secret level of the Blooglab space station. The most important message written in the SGA is Mortimer's letter, which can be read by a player in the Keen 5 ending sequence. Debate There is some debate about the shape of some letters, such as the z. In the reference translation above (which is remarkably similar to the translation found in Keen 3), it is shown as two vertical bars with a horizontal bar connecting them at the top. In Keen 6, the image translation is much smaller, so that each bar appears only one pixel wide/high. It seems that it should be rounded in shape as an inverted U. However due to the increased resolution in the Keen 3 version, it can be argued that it should not be rounded, otherwise it will contain curves like the letters N and O do (or even at the top of the letter A.) background resources SGA TTF There are several SGA TrueType fonts available that allow you to write the text of SGA It's easy. They all have different names, so you can set all fonts at the same time without any conflict. The first SGA font of the unknown authorStandard Galactic Alphabet 8 from Retodon8 sGA rounded malvineous (created with FontForge) SGA K3 Direct from DHeadshot (identical to the game when at 12pt) There is also a non-SGA Commander Keen-related pixel-perfect font called Commander Keen created by Dean Tersigni which is based on the original font from Commander Keen 4-6. This formatted FON font is available in three different sizes (large, medium and small). Commander Keen's large FON Dean Tersigni Commander Keen Medium FON Dean Tersigni Commander Keen Small FON Dean Tersigni in other Strife games contains a texture that appears to have slightly altered the SGA, most notably in MAP12: Temple of Oracle; As indicated on the second related page, they seem to read DAMEX from top to bottom. The standard galactic alphabet was also incorporated into Minecraft in October 2011, when it was used for enchantment. The name of the enchantment translates as a meaningless sentence and has little to do with the charm received.
