When quality matters, you turn to the industry precision wrench expert that aligns the latest technology with your quality goals to drive profitability to your bottom line. When it’s your job to ensure that safety-critical joints are correct, trust only the best to the task—LightStar™ Torque Wrench series.

ENSURE THAT YOUR AUDITING IS ACCURATE THE FIRST TIME, EVERY TIME.

The LightStar™ Torque Wrench technology is designed for auditing quality and is positioned inside an entire ecosystem of quality products to meet all your continuous quality improvement needs.

SMARTWRENCH™ TECHNOLOGY
- Patented Angle Restart Algorithm
- Identifies Gage (Tool # or ID)
- Verification of NM size
- Calibration tracking (usage and time)
- Insensitive to Point of Load

LIGHTSTAR™ WRENCH MEASUREMENTS
- Patented Angle Restart Algorithm—measures torque the instant the fastener starts retightening after overcoming static friction.
- Breakaway (first movement)—first recorded reading is residual torque in the joint.
- Loosening Test—Torque applied to loosen the fastener is the recorded reading.
- Angle Breakaway—captures the torque needed to set a fastener in motion.
- Peak—records the highest torque applied.
- Set—assembly applications.

PATENTED ANGLE RESTART ALGORITHM
Provides precision like no one else!

Removes False:
- High Readings due to overshoot or high stiction AND
- Low Readings due to wrench release before fastener rotation

600 DATA COLLECTOR
Provides seamless integration with the LightStar™ Torque Wrench. Graphically aided prompts eliminate wrong fastener measurements. Simply download inspection plans from QDA software suite with graphic content and workflow. Data collection will not occur if the incorrect wrench is being used on a specific part.

REPORTING
- Exception Report—identifies missing readings and non-conformance.
- Characteristic Review
- SPC (XBar & R/XBar S)
- Histograms
- Control Charts

INSENSITIVE TO POINT OF LOAD

The LightStar Torque Wrench series technology sensor ensures that the operator can pull at any point on the wrench and will receive an accurate measurement. Essential for difficult-to-reach critical fastener measurements.
