ConsumerAffairs.com more information about the comments on the website, please visit our SSS page. Robert Burlingame., CA Verified Review Original review: May 22, 2020Make reliable, does not take forever to make a load, relatively quiet. It has sufficient options depending on the size of the load. Additional options are time setting, hot, cold or hot/cold water settings. Extracts almost all of the water in light and medium loads; does an extra dry spin job on heavy loads. In all the years we've had, it's only been a service call. The groomer said this model was the best in a series and advised us to hold on to it for as long as possible. We're very happy about that. Edwin Livermore, CA Verified Reviewer Original review: May 21, 2020We use a Thing Washing Machine and it is the one that came with this apartment provided to us by our employers. My parents also had a Whirlpool Washing Machine and had no problems since I know them to use a Whie. The Thinging we use has been very reliable for the last 3 years. There's nothing wrong with it! The clothes come out clean, so it's work! Unlike the new pre-loading machines, it is a top-loading washing machine. I didn't use a pre-loading washing machine, so I don't know how it compares to them. The settings in our 90s are basic and very easy to use. (If you know what you're doing, of course). Lol! The word for reliable Whirlpool! Cynthia Las Vegas, NV Verified Review Original review: May 15, 2020We've also had a Whirlpool wasator and dryer for 8 years. All we did during that time was give him an adjust. This was done by a friend and lasted only about half an hour. I don't know exactly what you're doing but tune up didn't require any tracks. In fact, when my friend finished with his version of a tune, it was as if it was turbocharged and our clothes came out cleaner than ever. The washing machine runs quietly, as far as washing, and takes a ton of use in capacity, washing options, etc. is ideal for a washable. Martha Simpsonville, SC Verified Review Original review: May 14, 2020We whirlpool convertible platinum top loading high efficiency machine received received #WTW8000BWG February 2015. It cleans well and is easy to choose water temperature, spin speed, etc. It's easy to load, but because I'm short, I'm having trouble getting to something at the bottom of the bathtub. A stool is required. Lol. In the five years I've owned it, I didn't need any services to do on it. It's very reliable. This is because I bought the set i had whirlpool disruptors and dryers before and i have now caused my success with them. And so far, everything's fine. Highly recommended. R Boynton Beach, FL Verified Review Original review: November 18, 2019We recently purchased a Whirlpool front loader although reviews kept mentioning molds and fragrances. I discovered a water backing up in the soap dispenser. Cleaning the machine does a great job of clothes and I'm following other suggestions of cleaning drums from time to time. By the way, I bought my machine from Lowe's from scratch and the loser section and paid half price with a little bargain! Good deal and so far, good machine. Good luck and don't forget to remove and drain the water from the soap dispenser! Original review by Judy Paulding, OH Verified Reviewer: October 20, 2020Console went bad after just 2 years. You have to pay \$400.00 to change that. This is a known problem that my device guy told me. There should be a recall, but they want you to pay for it. Then it'll take six weeks to get out of China. I'm done with Whirlpool products. Ronald Hillsboro, MO Verified Reviewer Original review: October 15, 2020 Save your money on my best advice. It's better to wash it manually. I bought a new trailer with a Whirlpool washing machine. I've used it twice and it's not working now. Order the thinging pieces back up to a month or more. I asked for replacement and they said sorry, our warranty only covers repairs. We're not going to replace him. WOW What CRAPPY Company. In fact, don't do anything about how many times you have to call customer service and talk to anyone. I'm on my 28th phone, they're on standby, they're always hanging out with you, or they're just saying they're sorry we're busy, and then he hangs up. There's no message or anywhere else, just Bye! If someone had listened to my advice, I hope that would happen. DONT Buy Whirlpool.Maluleke Durban, Other Verified Review Original review: October 12, 2020Bly wash, beautiful and clean laundry results. However, it eventually vibrates and sounds like a train and moves uncontrolled. It was 3months into it and I was told to make sure the floor was flat, the next thing I was told to change beds. Praserjit Other, Other Verified Reviewer Verified Buyer Original review: October 8, 2020I have purchased a top load 6.2kg washing machine 3 months back. But now almost all plastic parts are having a crack. When I asked for replacement they said plastic parts are not covered by warranty. Neasia Absecon, NJ Verified Review Original October 7, 2020Washer is not worth the cost. After 4 years of use in a house for two, the ruined beds are gone and need to be replaced. The ruins feel like airplanes. I was told based on my description of the subject that caused the water to leak and friction due to thread into washing and bearing assembly. The Whirlpool warranty is just as expensive as the machine. The next would be difficult to live without a washing machine is a modern convenience. If your last leg is on or is no longer efficient or big enough to meet your family's needs, it may be time to start shopping around for a new model. Washing machines are designed differently for different lifestyles. Size, brand and settings are all important factors to consider before choosing the most suitable for you. Prices may vary and should only be used as a general guide. The right washing machine for you depends on your individual situation and personal preferences. Ask yourself these questions to help narrow your search: How often do I do laundry? How many people are in my house? How much do I want to spend? What are the most important features for me? Do I want a top or front loader? After you've figured out your budget and must-haves, compare a few models that meet your criteria to help you choose the right fit for you and your family. Your washer is an important part of your home, so put some thought and research into your next purchase to make sure your new device is everything I hoped it would be. To select our list of the best washing machines, we carried out our own independent research taking into account factors such as price, capacity, energy efficiency and extra features. We also took into account third-party product reviews. Washing machines last an average of 10 to 15 years. This depends on how often you use it and how much wear and tear you endure. Generally speaking, pre-loading ruins are more expensive, but they often provide more efficient cleaning. The best times of the year to buy the biggest appliances are: Photo On Unsplash by Andy Fitzsimon in September and October, when new models rolled on holiday weekends like Labor Day, Memorial Day and other times on Black Friday On weekdays Did this content help you?
