Rolson combination lock instructions

The image is not available forColour: Rolson Resettable Padlock Combination. This combination of lock provides excellent security whether at home, gym or travel. Features a 4-digit combined lock that is reset and customized. Size: 40mm (Approx.) Browse over Rolson locks online and buy in stores at BSM. TOTAL SATISFACTION GUARANTEEDIf you are not happy with the purchase you make in our stores, just return it to its original state, with proof of purchase, within 30 days and we will give you a full refund or replacement. To qualify for a refund or replacement, the products must be bundled with all components and original packaging. Terms apply to certain products: Refunds and exchanges may not be provided for audio/DVD and computer games. If one of these products turns out to be faulty it can be returned with a receipt within 30 days and we will exchange it for one of the same name. Unwanted Food or Beverages - Once supply conditions are disrupted, there are a number of factors beyond our control that can affect the quality of the product. Therefore, perishable goods, such as food and beverages, cannot be returned. For reasons of hygiene and safety, personal care products, cosmetics or intimate clothing cannot be returned. Mattresses, mattresses, blankets and pillows can only be returned if they are not used, in the original packaging and in a resale state. This Instructable will teach you how to crack the code of any lock combination in seconds! This skill is only to be used legally, and I am not responsible for anything other than teaching you how to unlock your own combinations of locks that you may have forgotten the code. BE SURE TO ASK ME ANY QUESTIONS IF YOU GET STUCK! The combined lock (using a bicycle lock as an example, as shown in the photos above) has three or more dials with a keyhole through the center of them. With the correct code (in this case 9-2-4) a keyhole of all dials on the lock becomes aligned and a jagged pin (second image) can be inserted. When the dials are moved or shuffled, the keyholes become unaligned and the jagged pin cannot be removed and is therefore locked in place. When collecting/hacking a combined lock the length of the rope can be used to create a makeshift handle to give you the best grip of the lock. A good grip is needed because in order to crack the lock you will need to apply strong and even upward force on the shackle throughout the procedure, and it can be difficult to get only bare hands. The ability to use strong even force on the shackles is vital to ensure that more friction on the locks of the dials so that when the dial is turned on the correct number number lead to a loud click and a small upward movement of the shackle. When you feel shackle move up a bit and release the click you can move on to the next dial and repeat the procedure until all the dials on the lock have been completed and the lock has been cracked. If the lock is locked on a solid object such as a gate or door, then the length of the rope will most likely not be necessary, as having it locked on something gives you more control and grip, thus meaning that you will be able to complete the entire procedure with only bare hands. To be able to crack the lock combination all you need is the length of the cord or rope about 30 cm in length and the combination of lock that you want to unlock. First of all, you will have to thread the length of the rope through the loop on the lock and fold it in half around the shackles, as shown in the first photo. This will become your makeshift handle, which will give you a stronger and stronger lock clutch to make the procedure easier. The next rope clasp is tight in your hands and press down on top of the lock as hard as you can with your thumb and make sure to continue to exert the same amount of force on the lock throughout the procedure. Keeping even pressure on the lock, now you need to rotate a little each of the dials in each direction. You will quickly find the dial that is the hardest to rotate, which is the dial you start with (in my case it was 'C'). Start gradually rotating the dial, which is until you hear a loud click and feel the shackles move up a bit. Check the dial and make a note of the number he clicked on then continue to gradually rotate the same dial to over-check (in my case dial 'C' was the hardest to turn and it clicked on '7'). If it keeps making a click sound on the same amount of each rotation, then you've successfully figured out the first digit of the code, and now you can move on to figuring out the next set. Once again, rotate each of the remaining dials to find which is the hardest to turn (in my case it was the 'B' dial). Repeat the same process you used on the first dial until you found out the second digit of your code (in my case it was '1'). If you have a three-digit combined lock like what I demonstrated, now you should only have one dial to find out. All you have to do now is keep the constant pressure on the lock and slowly twist the remaining dial in full rotation. When you rotate the dial, the last remaining digit required for the code will match the other two that you've previously found out, and the shackle should open. CONGRATULATIONS ON HAVING CRACKED THE CODE FOR YOUR LOCK COMBINATION! FEEL FREE TO ASK ANY QUESTIONS IF YOU ARE STUCK DON'T FORGET TO WATCH THE VIDEO DEMONSTRATION! Description Additional information 4pc Combination Lock Set a three-digit combination combination made from zinc alloy. The set includes 3pc x 22mm, and 1pc x 35mm, suitable for most travel purposes Description Extra information 45mm combination Padlock 45mm combination Padlock. Made from zinc alloy, with steel shackle. A four-digit combined lock that can be reset very easily.
