

## H63D Syndrome Research Consortium

Dear Doctor,

If you are consulting with a patient suffering from H63D Syndrome, be advised that ignorance is no longer a defensible position for delivering suboptimal care. The term 'rare diseases' is self-explanatory; their relative rarity neither negates their existence nor absolves you of the imperative to be adequately informed.

The medical community has a plethora of resources readily available, from Google Scholar and Researchsquare to Amazon, as well as specialized databases such as ResearchGate. Relying solely on outdated textbooks, PubMed, or traditional paradigms is not just anachronistic but flirtatious with becoming a legal liability, possibly in front of a litigious judge eager to mete out punitive damages.

Before cavalierly dismissing your patient's symptoms or prescribing an ill-advised treatment regimen, you owe it to your professional integrity to be properly educated. Should you require further guidance, we - an international, non-profit team of clinicians and biologists - are available for consultation, free of charge, with a singular mission: to save lives: [www.H63D.org](http://www.H63D.org)

Failure to adhere to these expectations not only contradicts the Hippocratic Oath but leaves you susceptible to legal repercussions.

Elevate your practice; educate yourself.

Sincerely,  
Riku Honda

Chairman  
International H63D Syndrome Research Consortium  
Tokyo Office
