## Home assistant icons hass

Is there a link that shows all the mdi icons that can be used in the customization section? @balloob has worked to get them updated on every release and almost all of them at this point, but there will always be some new ones. How do I manually update icons? I think there's a lot that doesn't work yet (lamp, spotlight, name a couple of important ones). Can you point me in the right direction? I thought it would be as simple as updating package.json or something, but it seems a little more involved. We added a few of them to the latest version that just came out an hour ago. We will try to add many more home automation icons, so before the release of v2.0.xx see how many use this package for home assistant. (MDI Supporter, joined in to say this). 7 Likes back to delorenj question, is there a way to manually update the Home Assistant to add more MDI icons? The Home Assistant contains several icons that were recently added to the MDI library. Is there a better way than downloading icons separately and using entity\_picture customization? 3 Likes gjaylor72: Back to delorenj question, is there a way to manually update the Home Assistant to add more MDI icons? The Home Assistant contains several icons that were recently added to the MDI library. Is there a better way than downloading icons separately and using entity\_picture customization? Bump because I'm in the same situation because one month ago waiting for new icons to be ha. It seems to me that there is a lack of routine to add to ha new icons from the icon store in each edition. Well, it doesn't happen instantly, but what's wrong with the decision from the post above you? In my case I am looking forward to the icons introduced on February 2. My guess is that Murphy will come along and say hello to me only after I manually download and install, so I'm curious to know how long it will take before they can ha. no one knows. you don't have to know on the eve which version is included (well, there is a hint inside the code, but it doesn't matter here). 2 ways: wait for this to happen, or DIY Hello Mr Aimec Can you explain how we upload icons from to home assistant ... I think you will solve my problem I am still waiting mdi:dome-light that was added in late April, and here we are halfway to June and the icon is still not ... I may be wrong, but I think I read somewhere in the forum that the problem is that materialdesignicons renamed some important HA icons. How to integrate a set of icons newer than 4.5.95 (I think this is the latest used HA) would cause a great makeover of what is used inside and would break some custom icons configured by users (some fade when a different picture is displayed). Although this is due to a relatively small number of icons, it would be a breakthrough in change. You do not upload material design icons just look for your name on the site - &gt; for example, I want a garage door icon, I saw it and its called garage-option, so haas subject card where he says icon you could make mdi:garage-variant Kyle 2 Likes icon support is just lame! Look at the official page - Oh no, you can not use this icon! We do not integrate that 2 year icon and no we do not say which icons are - yes that icon exists, but it has a different name, just change [randomthinghere] with [randomthinghere] (as you can guess, I try to change some icons and again give up 2348972398 time) 2 Likes Just change capital letters in small letters and add a dash between the word 1 How to экосистема домашней автоматизации Home Assistant используетиконки Design Material. Например, можно указать чтобы вместо названий табов были иконки. Вот пример как выглядит YAML с очень простой настройкой инт ерфейса: title: Home views: - title: default\_view badges:настройками превращается в такой интерфейс в браузере: И вместо названий табов использовать иконки. Установить иконку можно либо в интерфейсе редактирования, либо поправить YAML файл с настройкой интерфейса — вписать значение в раздел 'icon'. Title: Home views: - title: Main path: default\_view icon: mdi:home badges: [] Cards: null - name: System path: System icon: mdi:cog badges: [] cards: null После этого вместо текста из 'title' будут отображаться иконки: В Home Assistant названия иконок записываются так: mdi:cog. Сначала идет префикс mdi (Material Design Icons), потом двоеточие, а потом уже название иконки. Вообще, иконок в Material Design — миллион. Download официальный сайт с помощью которого можно найти нужную иконку. Но этот сайт очень-очень медленный. Мне настолько не нравится как плохо работает этот сайт что я your site where it is convenient to search for icons Home Assistant - . (Details of this project are available on this page). Note that the icon name can be saved in different ways. You can find mdi-cog, cog, mdi:cog. Home Assistant must use the mdi:cog option. On this page, I select useful icons that work in the Home Assistant. There is a very small list, but these icons are often needed. The full list can be found on the website . mdi:home icon house mdi:cog Settings, gear. mdi:bed-king-outline Bedroom mdi:lightbulb Bulb mdi:desk-lamp table lamp mdi:white-balance-iridescent Included LED tape mdi:coach-lamp street lamp mdi:fan-fan-off mdi fan:car mdi:car machine icon mdi:shower Celsius Symbol degree Celsius mdi:volume-high Speaker mdi:lan Computer network symbol mdi:server-network Server icon or NAS mdi:printer mdi:bell doorbell mdi:bell-off doorbell Ivan Bessarabov ivan@bessarabov.ru13 December 2019 Who did not know where - finding there is quite a rich choice. Click on the right icon and see your mdi how to use them? I'll do it like that. customize.yaml sensor.log/dbfile size: friendly\_name: Home Assistant Log Db icon: mdi:database groups.yaml Main\_Battery: view: yes icon: mdi:battery icon: mdi:settings name: group.rooms\_battery\_temp I continue to publish about setting up and using the HomeHome out of the box uses the material design icon. The material design icon is basically a symbolic font. Screenshot tool Glyphs (Glyphs) in InDesign with selected font Material design icons From the screen you can see that the icons are huge By default, the home assistant uses a small set of icons for object cards. Tags are also searched on the project page. When you select the right icon, in this example - Google Light bulb - the author of this icon. For its use in the Home Assistant, we specify the icon as mdi:lightbulb (mdi- use material design icons) or in the text editor:enter: button tap\_action: Action: Switch hold\_action: Action: More Information show\_icon: True show\_name: True show\_state: falseentity: switch.xxx that every time you go to the material design icon page, it is not very convenient to find the icon you want. At the same time, I'm not sure that Home Assistant has the support of all the icons. This project has 215 icons. There are two embedding options - easy and heavy;)The first version of Redact configuration configuration.yaml panel\_iframe: mdiindex: name: MDI Icon Index icon: mdi:vector-square URL: in my case, yes: the sudo service must restartTranse to the web interface must and see that it has added a new tab MDI Icon Index when clicking the icon values copied to the clipboard. The second option is to use your web server. In the Nginx virtual host configuration file, we set the root directory and location for the icons. We also add some security by denying access to everything except your network or networks: root/var/www/hass/: location /home-assistant-mdi/ { allow 192.168.0.0/24; do not allow anyone; } Continue download the project:cd/var/www/hass git clone Edit configuration.yaml: panel\_iframe: mdiindex: pavadinimas: MDI Icon Index piktograma: mdi:vector-square URL: Nginx:sudo nginx -s reloadUse home assistant:sudo service hass restartIn the moment of writing this text came the idea - why not use the local catalog itself hass;)Third optionIn my opinion is the most correct. Create a directory in the Pagrindinis asistentas catalog, which will be available from the web interface hass as /local/ Clone project repository:sudo mkdir/opt/homeassistant/config/www sudo chown homeassistant/opt/homeassistant/config/www Edited configuration file hass:vi/opt/homeassistant/config/configuration.yamlpanel\_iframe: mdiindex: pavadinimas: MDI Icon Index piktograma: mdi:vector-square URL: this directory is not processed by the hass authentication mechanism, and we will cover it with IP access. In the NGINX configuration file, we describe this directory:location/local/home-assistant-mdi useful;)
