Add to CompareLikelihood to RecommendSource: CapterraApril 3, 2019Overall: My experience is outstanding with this software and I recommend it. Pros: As a building automation engineer I deal with this software every day. I have been using this software for almost two years in most building automation projects done in Singapore.With the work bench module integrated into the software itself, I am able to manage all my project configurations effectively all the time.software is able to manipulate powerful graphics interfaces due to the large number of editing features offered in editing mode. I managed to cope with the 300,000 BMS dot project with this software. With my experience I can recommend this for automation engineers in the SCADA industry. Cons: When using time-time graphics to work, we encountered dynamic graphics lags during graphical transitions. These trends (hyper historian) also sometimes keep stopping when it comes to addressing many points. So these are the problems I need to fix in new updates. In all industries, GENESIS64 connects data connection, aggregation and visualization to provide the most flexible and comprehensive set of software that can be deployed in many areas for host-like applications such as HMI/SCADA, Building Automation, DCIM, Situational Awareness, OEE Analysis, Plant Data Historian and more. How to gold Microsoft Microsoft An application development partner, ICONICS is uniquely positioned to stay in line with the most advanced technologies. The HMI/SCADA package easily combines the latest proven technologies, using the experience gained from its predecessor, GENESIS32™. From a 64-bit core to a rich, familiar user interface, GENESIS64 allows users to work quickly and efficiently with HMI SCADA. The GENESIS64 SCADA software package easily connects the factory floor and facilities with corporate business systems. GENESIS64 is designed from the ground up to take advantage of OPC and OPC-UA, PLC, BACnet, Code-driven .NET, Silverlight and SharePoint® technology. GENESIS64 is available with 100 plc, DCS, electrical system and construction system, and IT system interfaces.
